Bachelor of Technology

Civil Engineering

Land Surveying Techniques 01CI0308

Objective of the Course:

• Surveyors play a crucial role in the construction and development industry. The importance of surveyor skills lies in their ability to provide critical data and information that is essential in the planning, design, and construction of buildings, roads, bridges, and other infrastructure.

Credit Earned: 00

Prerequisite: Basic Surveying Terms

Student's learning outcomes:

After successful completion of the course, it is expected that students will be able to,

- 1. Carry out temporary adjustment of survey instruments as per standard methods
- 2. Conduct linear measurements using survey instruments and tools
- 3. Carry out levelling and cross sectioning survey
- 4. Carry out setting out operations for buildings/ other structures
- 5. Carry out topographic survey.

Teaching and Examination Scheme

Teaching Scheme (Hours)			Cua lita	Theory Marks			Tutorial/ Practical Marks		Total
Theory	Tutorial	Practical	Credits	ESE (E)	IA (M)	CSE (I)	Viva (V)	Term Work (TW)	Marks
00	00	02	00	00	00	00	50	00	00

Detailed Syllabus

Sr. No	Topic Name	Hours
1	Carry out temporary adjustment of survey instruments as per standard methods	2
	1.1 Locate the station mark on the ground surface	
	1.2 Place the tripod over the station mark	
	1.3 Fix the instrument on the tripod head	
	1.4 Level the instrument by adjusting the legs of tripod	
2	Conduct linear measurements using chain and measuring tape for measurement in plans and slopes	4

Bachelor of Technology

Civil Engineering

	2.1 Interpret site drawings, layout plans, and boundary maps	
	2.2 Estimate the optimal length of chain required for measuring the required	
	2.3 Select suitable tools, instruments and marking materials for conducting	
	required work	
3	Conduct linear measurement using total stations	4
	3.1 Identify the location of master and secondary control points to set up the instrument	
	3.2 Identify the suitable benchmark as a reference to obtain a back-sight at station	
	3.3 Operate the total station instrument to compute and record the required data	
4	Carry out leveling and cross section survey using total station	6
	4.1 Interpret the scope of survey and data to be collected	
	4.2 Identify and locate the benchmark on the field as instructed by the surveyor	
	4.3 Input the data regarding survey job, station point, type of measurement, RL of benchmark etc. as required by the instrument	
	4.4 Obtain the RL(reduced level) of the staff point by bisecting the reflective prism and instructing the instrument to calculate the RL	
5	Carry out setting out operations	6
	5.1 Locate and identify the survey pegs or control point and mark the boundary lines	
	5.2 Calculate the distance and direction of building line from the boundary or base line as per plans/drawings	
	5.3 Identify all the grid lines /numbers provided on the plans/drawings and	
	establish them on the ground using string and pegs	
	establish them on the ground using string and pegs 5.4 Determine the corner of building on set building line to true measurement from adjacent boundary and mark the same as per drawings and specifications	
6	5.4 Determine the corner of building on set building line to true measurement	8
6	5.4 Determine the corner of building on set building line to true measurement from adjacent boundary and mark the same as per drawings and specifications	8
6	5.4 Determine the corner of building on set building line to true measurement from adjacent boundary and mark the same as per drawings and specifications Carry out topographic survey	8
6	5.4 Determine the corner of building on set building line to true measurement from adjacent boundary and mark the same as per drawings and specifications Carry out topographic survey 6.1 Identify the boundaries of the area to be surveyed 6.2 Identify a suitable location for setting up a total station such that maximum points	8
6	5.4 Determine the corner of building on set building line to true measurement from adjacent boundary and mark the same as per drawings and specifications Carry out topographic survey 6.1 Identify the boundaries of the area to be surveyed 6.2 Identify a suitable location for setting up a total station such that maximum points or features are visible from this point 6.3 Transfer/upload the recorded data on the computer system using appropriate CAD	8
6	5.4 Determine the corner of building on set building line to true measurement from adjacent boundary and mark the same as per drawings and specifications Carry out topographic survey 6.1 Identify the boundaries of the area to be surveyed 6.2 Identify a suitable location for setting up a total station such that maximum points or features are visible from this point 6.3 Transfer/upload the recorded data on the computer system using appropriate CAD software 6.4 Plot the recorded points using the CAD software to get the required contour/	30
7	5.4 Determine the corner of building on set building line to true measurement from adjacent boundary and mark the same as per drawings and specifications Carry out topographic survey 6.1 Identify the boundaries of the area to be surveyed 6.2 Identify a suitable location for setting up a total station such that maximum points or features are visible from this point 6.3 Transfer/upload the recorded data on the computer system using appropriate CAD software 6.4 Plot the recorded points using the CAD software to get the required contour/ topographic map as per the measured distance location, levels and angles	
	5.4 Determine the corner of building on set building line to true measurement from adjacent boundary and mark the same as per drawings and specifications Carry out topographic survey 6.1 Identify the boundaries of the area to be surveyed 6.2 Identify a suitable location for setting up a total station such that maximum points or features are visible from this point 6.3 Transfer/upload the recorded data on the computer system using appropriate CAD software 6.4 Plot the recorded points using the CAD software to get the required contour/ topographic map as per the measured distance location, levels and angles Total (Practical Hours)	30

Suggested Theory Distribution

The suggested theory distribution as per Bloom's taxonomy is as per follows. This distribution serves as guidelines for teachers and students to achieve an effective teaching-learning process

Distribution of Theory for course delivery and evaluation							
Remember	Understand	Apply	Analyze	Evaluate	Create		
00%	10%	35%	30%	15%	10%		

Instructional Method and Pedagogy:

- 1. At the start of course, the course delivery pattern, prerequisite of the subject will be discussed.
- 2. Attendance is compulsory in laboratory, which carries a 5% component of the overall evaluation.
- 3. The course includes a laboratory, where students have an opportunity to build an appreciation for the concepts being taught in laboratory.
- 4. All practical's will be performed in the field with the supervision of laboratory in charge.

Recommended Study Material

- 1. Surveying Vol. I & II by Duggal, S. K., Tata McGraw Hill Publication, New Delhi.
- 2. Surveying & Levelling by Subramanian, R., Oxford University Press, New Delhi.
- 3. Surveying and Levelling Vol. I & II by Kanetkar, T.P. and Kulkarni, S.V., Pune Vidhyarthi Gruh.
- 4. Surveying Vol. I, II & III by Arora, K.R., Standard Book House, New Delhi.
- 5. Surveying and Levelling by Basak, N.N., Tata Mcgraw Hill, New Delhi.
- 6. Surveying and Levelling by Agor, R., Khanna Publishers, New Delhi.
- 7. Advanced Surveying by Agor, R., Khanna Publishers, New Delhi.
- 8. Fundamentals of Surveying by Roy, S.K., Prentice Hall India, New Delhi.
