| SEMESTER | 2 |
| COURSE TITLE | MATHEMATICS-II |
| COURSE CODE | 09MA2102 |
| COURSE CREDITS | 4 |

## Objective:

1 Students are intended to understand the basic concepts and principles of Mathematics such as algebra, mensuration and trigonometry. This knowledge is required to understand and solve Engineering problems. The course will empower students to use proper Mathematical tool to understand Engineering principles and concepts. Main objective of the course is to apply concepts of algebra, mensuration, trigonometry or suitable Mathematical tool to solve given engineering problems.

Course Outcomes: After completion of this course, student will be able to:
1 Learn concept of Matrix and Determinant and solve the system of linear equations by using matrix.
2 Solve equations of algebraic expressions using algebraic skills.
3 Solve the problems using functions.
4 Solve the problem of function using the concept of Limit.
5 Find the nth term and Sum of arithmetic and geometric progression.

## Suggested Theory Distribution:

The suggested theory distribution as per Bloom's taxonomy is as follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

[^0]| Remember / <br> Knowledge | Understand | Apply | Analyze | Evaluate | Higher order <br> Thinking |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 30.00 | 30.00 | 30.00 | 10.00 |  |  |

## Instructional Method:

1 The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, Quiz, brainstorming.
2 The internal evaluation will be done on the basis of continuous evaluation of students in the class-rooms
