|-----------------------|----------------------------|
| <b>COURSE TITLE</b>   | <b>ENGINEERING PHYSICS</b> |
| <b>COURSE CODE</b>    | <b>01GS2101</b>            |
| <b>COURSE CREDITS</b> | <b>4</b>                   |

**Objective:**

- 1 To provide knowledge of basic concepts to resolve many engineering and technological problems.
- 2 To provide knowledge of basic concepts to resolve many engineering and technological problems.

**Course Outcomes:** After completion of this course, student will be able to:

- 1 Obtain knowledge about various Non-Destructive-Testing methods and use it in various engineering fields.
- 2 Acquire knowledge about various crystal structures and important properties of different materials.
- 3 Understand basic properties of superconducting materials and check its industrial applications.
- 4 Prepare Nano materials and use it for various engineering applications

**Pre-requisite of course:** To provide knowledge of basic concepts to resolve many engineering and technological problems.

**Teaching and Examination Scheme**

| <b>Theory Hours</b> | <b>Tutorial Hours</b> | <b>Practical Hours</b> | <b>ESE</b> | <b>IA</b> | <b>CSE</b> | <b>Viva</b> | <b>Term Work</b> |

### Suggested Theory Distribution:

The suggested theory distribution as per Bloom's taxonomy is as follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

| Distribution of Theory for course delivery and evaluation |            |       |         |          |                                  |
|-----------------------------------------------------------|------------|-------|---------|----------|----------------------------------|
| Remember / Knowledge                                      | Understand | Apply | Analyze | Evaluate | Higher order Thinking / Creative |
| 20.00                                                     | 20.00      | 30.00 | 15.00   | 10.00    | 5.00                             |

### Instructional Method:

- 1 The course delivery method will depend upon the requirement of content and need of students. The teacher in addition to conventional teaching method by black board, may also use any of tools such as demonstration, role play, etc.
- 2 The internal evaluation will be done on the basis of continuous evaluation of students in the laboratory and class-room.
- 3 Practical examination will be conducted at the end of semester for evaluation of performance of students in laboratory.
- 4 Students will use supplementary resources such as online videos, NPTEL videos, e-courses, Virtual Laboratory
