

FACULTY OF PHYSIOTHERAPY

Program & Subject:

Bachelor of Physiotherapy - B.P.T.

(4½ Year Degree Program)

INTRODUCTION:

The Bachelor of Physiotherapy program shall be under the Faculty of physiotherapy. The name of the Degree program shall be Bachelor of Physiotherapy (or, Bachelor of Physical Therapy) – The Faculty of Physiotherapy is Marwadi University's foray into creating the finest healthcare professionals for the country. With the support of knowledgeable academicians, superlative top management, and strong clinical practice, we are confident of making a mark in this prestigious profession.

Faculty of Physiotherapy Marwadi University built a professional to play a role in health promotion and treatment of the injury. They gain in-depth knowledge of the body and how it works with specialized hands-on clinical skills to assess, diagnose and treat symptoms of disease, illness, and disability.

VISION:

The vision of the Faculty of physiotherapy, Marwadi University is to be the recognized best in education and clinical practice.

MISSION:

1. To deliver world-class, cross-disciplinary, and quality education in the field of Physiotherapy through a well-devised and synchronized delivery structure and system.
2. To serve the patients/clients with efficient and cost-effective care with professional and ethical standards of Physiotherapy practice.
3. To foster knowledgeable, responsible, and skilled professionals.

PROGRAM OUTCOMES:

At the end of the program, graduates must be able to...

1. Do independent physiotherapy assessment and treatment for patient/client.

2. Work in conjunction with a multidisciplinary team to diagnose and treat movement dysfunctions as per red and yellow flags.
3. Develop skills for physical & functional diagnosis, treatment planning, management, and administration of physiotherapy treatment for patient support.
4. Find employment opportunities in Hospitals/Nursing homes/Sports Teams/Fitness Centers /Community Rehabilitation centers/Health planning boards/Health promotions services/Special Schools/Education Institutes/Industrial Sectors in both private and public sectors as well as in independent physiotherapy clinics.
5. Shall be able to pursue further qualifications to attain a senior position in the professional field and to keep abreast with the recent advances and new technology.
6. Ability to communicate effectively and flexibly in a manner that is appropriate for the patients and other healthcare professionals.
7. Acquaint with the basics of research, and involved in the research process.
8. Apply ethical principles and commit to professional ethics and responsibilities and norms of the Physiotherapy practice as provided by national and state councils.

1. CRITERIA OF ELIGIBILITY FOR ADMISSION:

- a) As per the rules of the Admission Committee for Professional Medical Educational Courses of Gujarat and/or the Government of Gujarat.
- b) A candidate applying for the degree of B.P.T being eligible for admission to the Physiotherapy College affiliated to UGC recognized University must have passed the Higher Secondary (10+2) or equivalent examination recognized by any Indian University or a duly constituted Board and passed in Physics, Chemistry and Biology, and English.

Or

Candidates who have studied abroad and have passed the equivalent examination as per the guidelines of the Association of Indian Universities to determine the eligibility and must have passed in the subjects: Physics, Chemistry, Biology, and English up to 12th Standard level.

- c) He /She has attained the age of 17 years as of 31st December of the concerned year.
- d) He/she should furnish at the time of submission of the application form, a certificate of Physical fitness from a registered medical practitioner that the candidate is physically fit to undergo the Physiotherapy course.
- e) A candidate fulfilling the above requirements will be provisionally admitted in the First Year of the B.P.T. Degree Program, as per the rules of the Admission Committee for Professional Medical Educational Courses of Gujarat and/or Government of Gujarat.

2. DURATION OF COURSE:

B.P.T is a 4 1/2 year regular & full-time degree Program. The 4½ years include **4 academic years for study and 6 months** (minimum 1144 hours) of the compulsory rotatory internship.

3. MEDIUM OF INSTRUCTION:

English shall be the medium of instruction for all the subjects of study and examination of the course.

4. ADMISSION TO THE PROGRAMME:

Admission granted by the Central Admission Committee appointed by the State Government to

any student shall be provisional till the Enrollment/ Registration/ Enlistment is made by the Marwadi University, and in case of admission is granted based on provisional eligibility certificate, the condition & instruction given by the Marwadi University should be complied within the time limit fixed by the University, otherwise, term kept and fees paid by such a student will be forfeited.

5. READMISSION AFTER BREAK OF STUDY:

All readmissions of candidates are subject to the approval of the Provost of Marwadi University.

6. ASSESSMENT PROCEDURE/ EVALUATION PROCEDURE:

- ❖ The complete academic performance of a student is evaluated in-house by the concerned teacher /department except in the case of practical work where an external examiner shall be nominated for the practical/ viva voce.
- ❖ The student's performance in each year of BPT, in general, is evaluated based on:
- ❖ Continuous Semester/Annual Evaluation (CSE)
- ❖ Internal Assessment (IA)
- ❖ End-year examination. (University Final Exam)

7. SCHEDULE OF EXAMINATION:

- ❖ The scheme of examination for the B.P.T course shall be divided into 4 professional examinations; each examination will be held at the end of each respective Academic year.
- ❖ There will be 1 internal examination (mid-year) after the completion of 4 months of the onset of the Academic year. There will be 1 Preliminary exam before the University exam.
- ❖ There will be a University examination through written paper and/or practical examination for 80% of the marks of the subject at the end of every Academic year.
- ❖ Internal evaluation is based on Continuous Semester/Annual Evaluation (CSE) and internal/ preliminary examination (IA), for 20% of the marks of the subject.
- ❖ Marwadi University will conduct supplementary exams for failed students after 4 months and before 6 months from the previous exam.

8. ELIGIBILITY CRITERIA TO APPEAR IN UNIVERSITY EXAMINATION:

- ❖ Attendance: A candidate must secure a minimum of 75% of attendance. A candidate is required to attend at least 75% of the total classes conducted in a year in all subjects prescribed for that year (separately), in theory, and practical/clinical to become eligible to appear for the University examination.
- ❖ No relaxation, whatsoever, will be permissible to this rule under any ground including indisposition, etc.
- ❖ Filling of University examination form: Candidates desirous of appearing for University examination must forward their applications in the prescribed form to the registrar through the Principal of the Institutions on or before the date prescribed for the purpose.

9. STUDENTS' ASSESSMENT:

- ❖ The complete academic performance of a student is evaluated in-house by the concerned teacher/department except in the final exam of practical work where an external examiner shall be nominated for the practical/viva voce.
- ❖ The student's performance in each course, in general, is evaluated based on in-year

continuous assessment, internal assessment (preliminary examination), and end-year examination.

- ❖ An in-year Continuous Semester/Annual Evaluation (CSE) is spread through the duration of the course and is done by the teacher teaching the course with a weightage of 10%. The assessment is done through various means.

The performance of every student in each subject will be evaluated as follows:

Subject with only theory components is as follows:

S r . N o .	Assessment Tool	Weightage
1	❖ IN-YEAR CONTINUOUS SEMESTER/ANNUAL EVALUATION (CSE) WHICH INCLUDES: 1.Attendance 2.Tutorials 3.Assignment 4.Surprise Test 5.Class Test 6.MCQ based quizzes 7.Presentations 8.Projects 9.Field visits 10.Seminars 11.Group discussions/activities etc.	TOTAL 20%
2	INTERNAL ASSESSMENT WHICH INCLUDES (IA) Internal &/Preliminary exam (compulsory) before University exam.	20%
3	END YEAR EXAMINATION (FINAL EXAM) University examination through written paper and/or practical examination	50%

- Subjects with practical components

S r. N o.	Assessment Tool	Weightage
1	INTERNAL ASSESSMENT WHICH INCLUDES a) Internal/Preliminary practical exam (10%) b) CSE/Journal (10%)	50%
2	END YEAR EXAMINATION (FINAL EXAM) University examination through practical examination	50%

10. PASSING CRITERIA:

As laid by Marwadi University Guidelines from time to time.

11. GENERAL INSTRUCTIONS FOR UNIVERSITY PRACTICAL EXAMINATION:

- ❖ The practical examination should be taken and marks should be given by a pair of examiners only and not by a single examiner. For the practical exam of Medical subjects, the number of examiners is as per Marwadi University rules. One examiner should be from the other university.
- ❖ Examiners shall not keep any kind of rough or fair copy of any mark sheet with him/her number of students per examiner examined per day should not exceed 50.

12. REASSESSMENT /REVIEW OF ANSWER PAPERS OF CANDIDATES:

As per the regulations prescribed for review of answer papers by the Marwadi University.

13. INTERNAL EVALUATION FOR REPEATERS:

- a. A candidate who has been declared fail in University examination for either of 1st, 2nd, 3rd, and 4th-year B.P.T is a repeater for said examination/paper/subject.
- b. The eligibility criteria for appearing for the University examination shall be applicable for repeaters. But the candidate may appear for the theory and practical held during that Academic year i.e., preliminary exam (I.A), for the improvement of internal marks for the subsequent University examination in the paper/papers he/she has failed. If a candidate does not wish to appear in a repeat internal examination, marks obtained in the previous internal examination will be counted as final marks.

14. PROMOTION CRITERIA / CARRY OVER SYSTEM:

Promotion Criteria/ Carry Over System is as per Marwadi University Guidelines.

15. GRACE MARKS:

The Grace marks may be awarded by the Marwadi University to a student, who has failed in any paper either theory or practical; but it is subject to the discretion of the Provost.

16. DEFINITION OF TRIAL/ATTEMPT

The first trial/attempt is deemed to take place when the candidate is due to appear as per the regulation of the University for the examination. Similarly, 2nd, 3rd, etc., trials relating to the subsequent examination. There is no limit to the number of trials in any year to pass the examination.

17. EXEMPTION FROM RE-EXAMINATION:

Candidates who have failed in the examination, but obtained pass marks in any subjects shall be exempted from re-examination in those subjects. Candidates who have failed in theory &/or practical in any subject will have to appear in respective components for that particular subject.

18. COMPULSORY ROTATORY INTERNSHIP

- a. Only after passing all the subjects in all years will he/she be allowed to undergo an internship. It includes a minimum of 1144 hours. The candidate will have to join the internship within 15 days of declaration of the 4th-year University examination result.
- b. The internships should be done in only Hospitals/Institutions recognized by the Gujarat State

Council for Physiotherapy (GSCPT). No candidate shall be awarded a degree certificate without successfully completing six months of Internship.

- c. The Internship should be rotatory and cover clinical branches concerned with Physiotherapy such as Orthopedics, Cardiothoracic including Intensive Care Unit (ICU), Neurology, Pediatrics, General Medicine, General Surgery, Obstetrics, Geriatrics, Women's health, Community Based Rehabilitation (CBR), and Gynecology both in-patient and out-patient services.
- d. On completion of all postings, the duly completed logbooks will be submitted to the Principal/Head of the program to be considered as having completed the internship program.

19. DRESS-CODE:

Professionalism with respect to dressing is encouraged throughout the course. It is each student's responsibility to have appropriate dressing during all class assignments and learning activities. Students are supposed to wear an apron compulsorily during practical and clinical hours.

20. MIGRATION/TRANSFER OF CANDIDATES:

The Provost shall have the powers to place any migration/transfer he/she is fit for grant of permission for migration/transfer to candidates undergoing a course of study in another University as prescribed by the University

21. COURSE OF STUDY – SUBJECTS & HOURS DISTRIBUTION

1 credit = 1 classroom lecture per week for 20 weeks (1 term) (makes 20 lectures in one term)

or

2 Practical/clinical hours per week for 20 weeks (1 term) (makes 40 practical hours in one term)

FIRST YEAR B. PHYSIOTHERAPY

Serial No.	Course Code	Course name	Theory Hours	Practical Hours	Total Hours	Credits
1	17PT0101	Human Anatomy	160	120	280	11
2	17PT0102	Human Physiology	120	120	240	9
3	17PT0103	Biochemistry	80	-	80	4
4	17PT0104	Psychology	80	-	80	4
5	17PT0105	Sociology	80	-	80	4
6	17PT0112	Exercise Therapy- 1 & Soft Tissue Mobilization	120	160	280	10
7	17PT0107	Biomedical Physics	80	40	120	5
8	17PT0110	Health Care Delivery System + Professional Practice & Ethics*	40	-	40	2
9	17PT0108	English*	40	-	40	2
10	17PT0109	Computer applications*	-	40	40	1
11	17PT0106	Environment Studies*	40	-	40	2
12	17PT0113	Observational Clinical/ Community Orientation/ Clinical Visit/ Study Tour*	-	120	120	3
Total			840	600	1440	57

*Not for a university exam.

SECOND YEAR B. PHYSIOTHERAPY

Serial No.	Course Code	Course name	Theory Hours	Practical Hours	Total Hours	Credits
1	17PT0201	Pathology	80	-	80	4
2	17PT0202	Microbiology	80	-	80	4
3	17PT0203	Pharmacology	80	-	80	4
4	17PT0204	Kinesiology	120	-	120	6
5	17PT0205	Electrotherapy	120	120	240	9
6	17PT0206	Exercise Therapy- 2	120	120	240	9
7	17PT0207	Psychiatry	40	-	40	2
8	17PT0208	Radiology/ENT/Ophthalmology*	40	-	40	2
9	17PT0209	Ethics & Allied Therapeutics*	40	-	40	2
10	17PT0210	Clinical Practice*	-	480	-	12
Total			720	720	1440	54

*Not for a university exam.

THIRD YEAR B. PHYSIOTHERAPY

Serial No.	Course Code	Course name	Theory Hours	Practical Hours	Total Hours	Credits
1	17PT0301	Medicine (General Medicine & Skin)	100 (80+20)	-	100	5
2	17PT0302	Neurology & Pediatrics	100 (80+20)	-	100	5
3	17PT0303	Surgery (General Surgery, Plastic Surgery, Neurosurgery, Cardiothoracic Surgery, Obstetrics & Gynecology)	160 (40+20+20+40+40)	-	160	8
4	17PT0304	Physical & Functional Diagnosis	80	80	160	6
5	17PT0305	Orthopedics (Traumatic & Non-traumatic)	80	-	80	4
6	17PT0306	Preventive Healthcare and Community Medicine	80	-	80	4
7	17PT0307	Professional Practice & Ethics + Evidence Based Practice & ICF*	40	-	40	2
8	17PT0308	Clinical Hours*	-	720	720	18
Total			640	800	1440	52

*Not for a university exam.

FOURTH YEAR B.PHYSIOTHERAPY

Serial No.	Course Code	Course name	Theory Hours	Practical Hours	Total Hours	Credits
1	17PT0401	Physiotherapy in Musculoskeletal Conditions	80	40	120	5
2	17PT0402	Physiotherapy in Neurological Conditions	80	40	120	5
3	17PT0403	Physiotherapy in Cardio Pulmonary and Medical Surgical Condition	80	40	120	5
4	17PT0404	Physiotherapy in Community Health and Bio- engineering	40	20	60	2
5	17PT0405	Biostatistics and Research Methodology	40	0	40	2
6	17PT0406	Professional Practice and Ethics And Administrative Management	40	0	40	2
7	17PT0407	Clinical Hours	0	960	960	24
Total			360	1100	1460	45

22. SCHEME OF EXAMINATION: SUBJECTS AND DISTRIBUTION OF MARKS

First Year B. Physiotherapy						
S r. N o.	Subject	Theory Marks		Practical Marks		Total Marks
		External	Internal	External	Internal	
1	Human Anatomy	80	20	80	20	200
2	Human Physiology	80	20	80	20	200
3	Biochemistry	40	10	----	----	50
4	Psychology	40	10	----	----	50
5	Sociology	40	10	----	----	50
6	Exercise Therapy- 1 & Soft Tissue Mobilization	80	20	80	20	200
7	Biomedical Physics	40	10	----	----	50
Total		400	100	240	60	800

Second Year B. Physiotherapy						
S r. N o.	Subject	Theory Marks		Practical Marks		Total Marks
		External	Internal	External	Internal	
1	Pathology	40	10	----	----	50
2	Microbiology	40	10	----	----	50
3	Pharmacology	40	10	----	----	50
4	Exercise Therapy 2	80	20	80	20	200
5	Kinesiology	40	10	----	----	50
6	Psychiatry	40	10	----	----	50
7	Electrotherapy	80	20	80	20	200
Total		360	90	160	40	650

Third Year B. Physiotherapy						
S r · N o ·	Subject	Theory Marks		Practical Marks		Total Marks
		External	Internal	External	Internal	
1	Medicine (General Medicine & Skin)	80	20	----	----	100
2	Neurology & Pediatrics	80	20	----	----	100
3	Surgery (General Surgery, Plastic Surgery, Neurosurgery, Cardiothoracic Surgery Obstetrics & Gynecology)	80	20	----	----	100
4	Physical & Functional Diagnosis	80	20	80	20	200
5	Orthopedic (Traumatic & Non-traumatic)	80	20	----	----	100
6	Preventive Healthcare and Community Medicine	40	10	----	----	50
Total		440	110	80	20	650

Fourth Year B. Physiotherapy						
S r · N o ·	Subject	Theory Marks		Practical Marks		Total Marks
		External	Internal	External	Internal	
1	Physiotherapy in Musculoskeletal Conditions	80	20	80	20	200
2	Physiotherapy in Neurological Conditions	80	20	80	20	200
3	Physiotherapy in Cardio Pulmonary and Medical Surgical Condition	80	20	80	20	200
4	Physiotherapy in Community Health and Bio- engineering	80	20	80	20	200

Total	360	90	320	80	850
-------	-----	----	-----	----	-----

23. LECTURE OF QUESTION PAPERS

Paper-style for 80 marks subjects for University (External) examination

Duration: 3 Hours		
Que. 1 Long Answer	02 x 10 = 20	(Any 2 out of 3)
Que. 2 Short Answer	02 x 05 = 10	(Any 2 out of 3)
Que. 3 Very Short Answer	05 x 02 = 10	(Any 5 out of 6)
Que. 4 Long Answer	02 x 10 = 20	(Any 2 out of 3)
Que. 5 Short Answer	02 x 05 = 10	(Any 2 out of 3)
Que. 6 Very Short Answer	05 x 02 = 10	(Any 5 out of 6)

Paper-style for 40 marks subjects for University (External) examination

Duration: 2 Hours		
Que. 1 Long Answer	02 x 10 = 20	(Any 2 out of 3)
Que. 2 Short Answer	02 x 05 = 10	(Any 2 out of 3)
Que. 3 Very Short Answer	05 x 02 = 10	(Any 5 out of 6)

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	1
COURSE TITLE	ANATOMY
COURSE CODE	17PT0101
COURSE CREDITS	11

Objective:

- 1 It is designed to provide students with the working knowledge of the structure of the human body which is essential foundation for their clinical studies
- 2 To understand the regional anatomy in detail.
- 3 To understand anatomical changes right from embryonic period till old age.
- 4 To understand histological features of various organs.
- 5 To understand its application in medical science.
- 6 To apply the concept of functional Anatomy in physiotherapy practice.
- 7 To acquire the knowledge of structure of human body in general.
- 8 To understand the regional anatomy in detail
- 9 To understand anatomical changes right from embryonic period till old age
- 10 To understand histological features of various organs
- 11 To understand its application in medical science
- 12 To apply the concept of functional Anatomy in physiotherapy practice

Course Outcomes: After completion of this course, student will be able to:

- 1 Acquire the knowledge of structure of human body in general.
- 2 Understand the regional anatomy in detail.
- 3 Anatomical changes right from embryonic period till old age
- 4 Understand histological features of various organs.
- 5 Understand its application in medical science.
- 6 Apply the concept of functional Anatomy in physiotherapy practice.

Pre-requisite of course: A basic understanding of human biology – bones, muscles and organs is often a fundamental prerequisite.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
160	0	120	50	30	20	50	50

Contents : Unit	Topics	Contact Hours
1	GENERAL ANATOMY Introduction and Anatomical terms, skin, superficial fascia and deep fascia, 1.3 CVS, Portal system, collateral circulation & arteries, Lymphatic system, Osteology, Myology, Syndesmology, Nervous system	20
2	HISTOLOGY Cell, Epithelia, Connective tissue general, Cartilage, Bones, Muscles, Nerves, Blood and phagocytic system, Lymph and lymphatic system, Blood vessels, Skin and its appendages, Central nervous system	10
3	GENERAL EMBRYOLOGY Spermatogenesis, Structure of Spermatozoon, Oogenesis, Ovarian follicle, Fertilization, Formation of germ layers, Placental development, Brachial arches, Development of skeletal system, Development of locomotor system, Development of nervous system	10
4	MYOLOGY, OSTEOLOGY & ARTHROLOGY Fascia & muscles of scalp and face, Muscles of mastication, Temporomandibular joint, Muscles of orbit & related nerves, Superficial and lateral cervical muscle, platysma, trapezius, SCM, Anterior triangle of neck-suprahyoid & infrahyoid, Anterior and lateral vertebral muscles, Cervical plexus, Cranial nerve (1st to 6th) (7th & 8th), Cranial nerve (9th, 10th, 11th, 12th), Sub occipital triangle & sub occipital muscles, Joints of vertebral column to cranium, Muscles of thorax and movement of respiration, Joints of thorax including sternochondral & chondrocostal joints, Muscles of abdomen, Muscles of pelvis, Muscles of perineum, Vertebral joint, Joints of pelvis (lumbosacral, sacrococcygeal, pubic symphysis), Deep muscles of back, Muscles connecting upper limb to vertebral column with regional structures, Scapular muscles including regional structures, Muscles of arm, Axilla and brachial plexus, Joints of shoulder girdle, Shoulder joint, Anterior antebrachial muscles (front of forearm) with regional structure, Posterior antebrachial muscles (back of forearm) with regional structures, Elbow joint & cubital fossa, Radioulnar joint (superior, middle and inferior), The retinacula, fascia and synovial sheath of wrist and hand, Muscles of hand, Radiocarpal / wrist joint, Other joints of hand, Muscles connecting lower limb to vertebral column with regional structures, Muscles of iliac region (psoas muscle) and lumbar plexus, Anterior femoral muscles (front of thigh) including regional structures, Medial femoral muscles (adductor compartment) including regional structures, Muscles of gluteal region including regional structures, Posterior femoral muscles (back of thigh) including regional structures, Hip joint, Anterior crural muscles including regional structures, Lateral crural muscles including regional structures, Posterior crural muscles including regional structures, Knee joint, Popliteal fossa, Muscles of foot, Tibiofibular joint (superior, middle and inferior), Talocrural joint (ankle joint), Joints of foot & Arches	20

Contents : Unit	Topics	Contact Hours
5	NERVOUS SYSTEM Introduction to nervous system & meanings, Spinal cord & peripheral nerves and vertebral canal, Brain stem-1, Brain stem-2, Cerebellum, Diencephalon with basal ganglia, Limbic system with olfactory region, Cerebrum & functional areas, Spinal tracts & overview of CNS – I, Spinal tracts & overview of CNS – II	12
6	RESPIRATORY SYSTEM Thoracic cage & Air passages, Respiratory organs - lungs, pleura, bronchial tree, broncho-pulmonary segments, Diaphragm: Origin, insertion, nerve supply and action, openings in the diaphragm, Intercostal muscles and Accessory muscles of respiration: Origin, insertion, nerve supply and action	8
7	CARDIOVASCULAR SYSTEM Blood, lymph and tissue fluid- characteristic, composition, function, The heart – position, shape and parts; main arteries, veins, capillaries, Lymph circulation	20
8	DIGESTIVE SYSTEM Anatomy of digestive organs– Oesophagus, Stomach, Intestine, Rectum etc, Digestive glands, Liver, Pancreas, Gall bladder	20
9	URINARY SYSTEM Anatomy of urinary organs, kidneys, ureters, urinary bladder, urethra in males and females etc, Types of bladder especially in paraplegics	10
10	ENDOCRINE SYSTEM Glands -classification, sites and secretion, Hormones	8
11	REPRODUCTIVE SYSTEM Brief outline of genital organs, Outline of male and female reproductive system	12
12	SPECIAL SENSORY ORGANS & SENSATIONS Emphasis on skin, ear and eyes .Less detail on smell and taste	10
Total Hours		160

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
1	Dissection of upper Limb arm , forearm, hand	15
2	Dissection of Lower Limb thigh region, leg, foot	15
3	Identification of anterolateral abdominal wall, posterior abdominal wall & thoracic cage. upper thorax , thoracic organs, abdominal wall , gluteal region , upper /lower back	20

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
4	Anatomical position & description of all bones anatomical positions: , description of upper limb bones, description of lower limb bones, description if axial skeletal bones, description of skull	20
5	Surface marking in cadaver and living body surface marking in cadaver, surface marking in living body	20
6	Radiological examination of upper limb, lower limb & other special X-rays. X-ray reading of upper limb, X-ray description of lower limb, X-ray description of chest and others	10
7	In BRAIN: Identification of all parts and various sections at different levels. identification of different parts of brain: forebrain, midbrain, hindbrain	10
8	In HISTOLOGY PRACTICAL: Identification of basic tissues of body. identification of different connective tissues	10
Total Hours		120

Textbook :

- 1 Human Anatomy and General anatomy handbook, B.D. Chaurasia, Vol.1, 2, 3 , CBS publications, 2023

Suggested Theory Distribution:

The suggested theory distribution as per Bloom's taxonomy is as follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation

Remember / Knowledge	Understand	Apply	Analyze	Evaluate	Higher order Thinking / Creative
20.00	30.00	25.00	15.00	10.00	0.00

Instructional Method:

- 1 Theory + Practical

Supplementary Resources:

- 1 NA

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	1
COURSE TITLE	PHYSIOLOGY
COURSE CODE	17PT0102
COURSE CREDITS	9

Objective:

- 1 To give the student an in-depth knowledge of fundamental reactions of living organisms, particularly in the human body. The major topics covered include the following: the cell; primary tissue; connective tissue; skin; muscle; nervous tissue; blood; lymphoid tissues; respiration; blood vessels; circulation; cardiac cycle; systemic circulation; gastrointestinal tract; kidneys; uterus; urinary tract; pregnancy; endocrine system.
- 2 To understand the contribution of various organs & systems in maintaining homeostasis and body functions.
- 3 To understand and study in detail the physiology of the various systems of the body including functional physiology of the cell, blood, neuromuscular, cardiovascular, and pulmonary systems, nervous system, special senses, excretory system, digestive system, reproductive system, and endocrine system at a microscopic and macroscopic level.
- 4 To understand how these separate systems interact to yield integrated physiological responses to challenges such as exercise, fasting, and ascent to high altitude, and how they can sometimes fail.
- 5 To understand and study in detail the physiology of the various systems of the body including functional physiology of the cell, blood, neuromuscular, cardiovascular, and pulmonary systems, nervous system, special senses, excretory system, digestive system, reproductive system, and endocrine system at a microscopic and macroscopic level.
- 6 To understand the role of hormones, enzymes, and other different types of cells in the human body.
- 7 To understand the contribution of various organs & systems in maintaining homeostasis and body functions.
- 8 To involve a detailed study of the physiology of the various systems of the body including functional physiology of the cell, blood, neuro-muscular, cardiovascular, and pulmonary systems, nervous system, special senses, excretory system, digestive system, reproductive system, and endocrine system at a microscopic and macroscopic level.
- 9 To understand the role of hormones, enzymes, and other different types of cells in the human body
- 10 To understand how these separate systems interact to yield integrated physiological responses to challenges such as exercise, fasting, and ascent to high altitude, and how they can sometimes fail.

Objective:

- 11 To relate the concept of human physiology in physiotherapy application including exercise physiology.

Course Outcomes: After completion of this course, student will be able to:

- 1 Understand the contribution of various organs & systems in maintaining homeostasis and body functions.
- 2 To involve a detailed study of the physiology of the various systems of the body including functional physiology of the cell, blood, neuro-muscular, cardiovascular, and pulmonary systems, nervous system, special senses, excretory system, digestive system, reproductive system, and endocrine system at a microscopic and macroscopic level.
- 3 Understand the role of hormones, enzymes, and other different types of cells in the human body.
- 4 Understand how these separate systems interact to yield integrated physiological responses to challenges such as exercise, fasting, and ascent to high altitude, and how they can sometimes fail.
- 5 Relate the concept of human physiology in physiotherapy application including exercise physiology.

Pre-requisite of course: A basic understanding of human biology and functioning of systems is often a fundamental prerequisite.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
120	0	120	50	30	20	50	50

Contents : Unit	Topics	Contact Hours
1	GENERAL PHYSIOLOGY cell: morphology , organelles: their structures and functions, transport mechanism across cell membrane, body fluids: distribution and composition	10
2	BLOOD Introduction: Composition and functions of blood., Plasma: Composition, formation, functions. Plasma proteins., RBC: count and its variations. Erythropoiesis-stages, factors regulating. Reticulo-endothelial system (in brief). Haemoglobin-structure, function and derivatives Anemia (in detail), types of Jaundice. Blood indices, PCV, ESR., WBC: Classification. Morphology, functions, count, its variation of each. Immunity., Platelets: Morphology, functions, count, its variations. Hemostatic mechanisms: Blood coagulation-factors, mechanisms. Their disorders Anticoagulants, Blood Groups: Landsteiner's law. Types, significance, determination, Erythroblastosis foetalis., Blood Transfusion: Cross matching. Indications and complications., Lymph: Composition, formation, circulation and functions.	10

Contents : Unit	Topics	Contact Hours
3	CARDIOVASCULAR SYSTEM Introduction: Physiological anatomy and nerve supply of the heart and blood vessels. Organization of CVS. Cardiac muscles: Structure, Ionic basis of action potential and pacemaker potential. Properties., Conducting system: Components. Impulse conduction Cardiac Cycle: Definition. Phases of cardiac cycle. Pressure and volume curves. Heart sounds—causes, character. ECG: Definition, Different types of leads. Waves and their causes. P-R interval. Heart block., Cardiac Output: Definition. Normal value. Determinants. Stroke volume and its regulation. Heart rate and its regulation. Their variations. Cardiovascular reflex., Arterial Blood Pressure: Definition. Normal values and its variations. Determinants., Peripheral resistance. Regulation of BP., Hemorrhage and shock., Regional Circulation: Coronary, Cerebral and Cutaneous circulation., Cardio-vascular changes during exercise.	15
4	RESPIRATORY SYSTEM Introduction: Physiological anatomy—Pleura, tracheo-bronchial tree, alveolus, Respiratory membrane and their nerve supply. Dead Space: Types and their definition. Functions of respiratory system. Respiratory muscles., Mechanics of breathing: Intra-pleural and Intra-pulmonary pressure changes during respiration. Chest expansion. Lung compliance: Normal value, pressure-volume curve, factors affecting compliance and its variations. Surfactant—Composition, production, functions. RDS., Spirometry: Lung volumes and capacities. Timed vital capacity and its clinical significance, PEFR, Maximum ventilation volume, Respiratory minute volume., Pulmonary Circulation. Ventilation-perfusion ratio and its importance., Transport of respiratory gases: Diffusion across the respiratory membrane. Oxygen transport— Different forms, oxygen –haemoglobin dissociation curve. Factors affecting it., Regulation of Respiration: Neural Regulation. Hering-breuer's reflex. Voluntary control. Chemical Regulation., Hypoxia: Effects of hypoxia. Types of hypoxia. Hyperbaric oxygen therapy. Acclimatization Hype-rcapnoea, Asphyxia, Cyanosis—types and features., Disorders of Respiration: Dyspnoea, Orthopnoea. Hy, Respiratory changes during exercise.	15

Contents : Unit	Topics	Contact Hours
5	DIGESTIVE SYSTEM Introduction: Physiological anatomy and nerve supply of alimentary canal. Enteric nervous system., Salivary Secretion: Saliva Composition. Functions. Regulation. Mastication (in brief). Swallowing: Definition. Different stages. Function., Stomach: Functions. Gastric juice: Gland, composition, function, regulation. Gastrin: Production, function and regulation. Peptic ulcer. Gastric motility. Gastric emptying. Vomiting. Pancreatic Secretion: Composition, production, function. Regulation., Stomach: Functions. Gastric juice: Gland, composition, function, regulation. Gastrin: Production, function and regulation. Peptic ulcer. Gastric motility. Gastric emptying. Vomiting. Pancreatic Secretion: Composition, production, function. Regulation., Liver: Functions of liver. Bile secretion: Composition, functions and regulation. Gall bladder: Functions., Intestine: Succus entericus: Composition, function and regulation of secretion. Intestinal motility and its function and regulation., Mechanism of Defecation.	12
6	NUTRITION Digestion, absorption and metabolism of carbohydrates., Digestion, absorption and metabolism of fats., Digestion, absorption and metabolism of proteins., Vitamins, sources, functions and resources., Balanced diet in different age groups and occupation.	8
7	ENDOCRINE SYSTEM Introduction: Hormone. Classification, mechanism of action, function of hormones., Pituitary Gland: Anterior Pituitary and Posterior Pituitary hormones: Secretory cells action on target cells, regulation of each hormone. Disorders: gigantism, acromegaly, dwarfism, diabetes insipidus. Physiology of growth and development hormonal and other influences. Pituitary-hypothalamus relationship., Thyroid Gland: Thyroid hormone and calcitonin: secretory cells, synthesis, storage action and regulation of secretion. Disorders- myxedema, cretinism, grave's disease., Parathyroid hormones: secretory cell, regulation of secretion. Disorders- hypothyroidism and hyperthyroidism., Adrenal Medulla: Secretory cells, action, regulation of secretion of adrenaline and noradrenaline., Adrenal Gland: Adrenal Cortex: Secretory cells, synthesis, action, regulation of secretion of aldosterone, cortisol and androgens., Endocrine Pancreas: Secretory cells, action, regulation of secretion of insulin and glucagon. Glucose metabolism and its regulation. Disorders- diabetes mellitus., Calcitrol, thymus and pineal gland (in brief)	15

Contents : Unit	Topics	Contact Hours
8	REPRODUCTIVE SYSTEM Introduction: Physiological anatomy reproductive organs. Sex determination. Sex differentiation. Disorder, Male Reproductive System: Functions of testes. Pubertal changes in males. Spermatogenesis. Testosterone: action. Regulation of secretion. Semen., Female Reproductive System: Functions of ovaries and uterus. Pubertal changes in females. Oogenesis. Hormones: estrogen and progesterone-action, Menstrual Cycle: Phases. Ovarian cycle. Uterine cycle. Hormonal basis. Menarche. Menopause., Pregnancy: Pregnancy tests. Physiological changes during pregnancy. Functions of placenta. Lactation. Contraception method.	5
9	EXCRETORY SYSTEM introduction: Physiological anatomy. Nephrons–cortical and juxtamedullary. Juxtaglomerular apparatus. Renal blood flow and its regulation. Functions of kidneys., Mechanism of Urine Formation: Glomerular Filtration: Mechanism of glomerular filtration. GFR–normal value and factors affecting. Renal clearance. Creatinine clearance., Mechanism of concentrating and diluting the Urine: Counter-current mechanism. Regulation of water excretion. Diuresis. Diuretics., Mechanism of concentrating and diluting the Urine: Counter-current mechanism. Regulation of water excretion. Diuresis. Diuretics., Acid-Base balance (very brief), Artificial Kidney: Principle of hemodialysis., Skin and temperature regulation	5
10	NEUROMUSCULAR PHYSIOLOGY Structure of neuron, membrane potential and generation of action potential, nerve impulse conduction, saltatory conduction., Neuromuscular junction and drugs affecting on it, myasthenia gravis, lambert eaton syndrome., Degeneration and regeneration., Types of muscles and their gross structures., Strength duration curve, stimulus and chronaxie rheobase., Structure of sarcomere-basis of muscle contraction, starlings law, changes during muscle contraction., Electrical- biphasic and mono-phasic action potential., Isometric and isotonic contractions. Chemical, thermal and physical changes., Motor unit and its properties, Nature of voluntary contraction. Fatigue.	5

Contents : Unit	Topics	Contact Hours
11	NERVOUS SYSTEM Introduction: Organization of CNS–central and peripheral nervous system. Functions of nervous system., Synapse: Functional anatomy, classification, Synaptic transmission., Sensory Mechanism: Sensory receptors: function, classification and properties. Sensory pathway: The ascending tracts–Posterior column tracts, lateral spino-thalamic tract and the anterior spino- thalamic tract–their origin, course, termination and functions. The trigeminal pathway.Sensory cortex.Somatic sensations: crude touch, fine touch, tactile localization, tactile discrimination, stereognosis, vibration sense, kinesthetic sensations.Pain sensation: mechanism of pain. Cutaneous pain–slow and fast pain, hyperalgesia, deep pain, Visceral pain, referred pain. Gate control theory of pain. Tabes dorsalis, sensoryataxia, Motor Mechanism: Motor Cortex. Motor pathway: The descending tracts– pyramidal tracts, extrapyramidal tracts–origin, course, termination and functions. Upper motor neuron and lower motor neuron, Reflex Action: Monosynaptic and polysynaptic reflexes, superficial reflexes, deep reflexes. Stretch reflex–structure of muscle spindle, pathway, higher control and functions. Inverse stretch reflex. Muscle tone–definition, and properties hypotonia, atonia and hypertonia. UMN and LMN., Spinal cord Lesions: Complete transaction and Hemisection of the spinalcord., Cerebellum: Functions. Cerebellar ataxia., Posture and Equilibrium: Postural reflexes–spinal, medullary, midbrain and cerebral reflexes, Thalamus and Hypothalamus: Nuclei, functions. Thalamic syndrome., Reticular Formation and Limbic System: Components and Functions. Basal Ganglia: Structures included and functions. Parkinson’s disease.	15
12	SPECIAL SENSES Vision: Introduction: Functional anatomy of eyeball. Functions of cornea, iris, Pupil, aqueous humor–glaucoma, lens–cataract, vitreous humor, rods and cones. Photopic vision. Scotopic vision., Visual Pathway and the effects of lesions., Refractive Errors: myopia, hypermetropia, presbyopia and astigmatism, Visual Reflexes: Accommodation, Pupillary and Light. Visual acuity and Visual field, Light adaptation. Dark adaptation. Color vision–color blindness. Nyctalopia, Audition: Physiological anatomy of the ear. Functions of external ear, middle ear and inner ear. Structure of Cochlea and organ of corti. Auditory pathway. Types of Deafness. Tests for hearing. Audiometry., Taste: Taste buds. Primary tastes. Gustatory pathway., Smell: Olfactory membrane. Olfactory pathway, Vestibular Apparatus: Crista ampullaris and macula. Functions. Disorders.	5
Total Hours		120

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
1	NERVE MUSCLE PHYSIOLOGY nerve muscle physiology, gastro-cnemius muscle sciatic nerve prep, action potential etc, effect of temperature on s.m.c, Effect of Load on Skeletal Muscle Contraction	25
2	CARDIO-VASCULAR SYSTEM ECG, BP, radial pulse, Spirometry/Respiratory Efficiency Test, Examination of CVS and Respiratory system	25
3	INSTRUMENTS recording body temperature	20
4	HAEMATOLOGY Total red Cell Count, Total red Cell Count, Cells in Peripheral blood film, Differential WBC count, arneth count, absolute count, blood grouping, bleeding time/clotting time, blood PCV,ESR	30
5	CENTRAL NERVOUS SYSTEM Sensory examination, motor examination, cranial nerve examination	20
Total Hours		120

Suggested Theory Distribution:

The suggested theory distribution as per Bloom's taxonomy is as follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember / Knowledge	Understand	Apply	Analyze	Evaluate	Higher order Thinking / Creative
20.00	30.00	25.00	15.00	10.00	0.00

Instructional Method:

- 1 Theory+Practicals

Supplementary Resources:

- 1 NA

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	1
COURSE TITLE	BIOCHEMISTRY
COURSE CODE	17PT0103
COURSE CREDITS	4

Objective:

- 1 Able to know the different kind of metabolic pathways in our body
basic nutrition values what we have to take daily intake
basic knowledge about vitamins, hormones, minerals, proteins, lipids, carbohydrates and enzymes.
they able to know cell membrane system, dna and rna and their functions.
- 2 To understand the basics and clinical aspects of enzymes and regulation of enzymatic activity
and diagnostic use of enzymes.
- 3 To understand to apply clinical biochemistry tests like blood, liver, and renal functions and their importance in body functions.
- 4 To acquire knowledge in brief about the clinical biochemistry, with special reference to the liver and renal function tests, blood study for lipid profile, metabolism of fat, carbohydrates, proteins, bone minerals, electrolyte balance, water balance acid-base, and acid-base balance.
- 5 To Describe the structure and function of the cell in brief.
- 6 To Describe the normal functions of different components of food.
- 7 To Describe basal metabolic rate and factors affecting basal metabolic rate with special reference to obesity.
- 8 To Describe nutritional aspects of carbohydrates, lipids, proteins, vitamins, and minerals and their metabolism with special reference to obesity.
- 9 To Understand the basics and clinical aspects of enzymes and regulation of enzymatic activity and diagnostic use of enzymes.
- 10 To Describe in detail the biochemical aspects of muscle contraction.

Course Outcomes: After completion of this course, student will be able to:

- 1 Describe the structure and function of the cell in brief.
- 2 Describe the normal functions of different components of food.
- 3 Describe basal metabolic rate and factors affecting basal metabolic rate with special reference to obesity.
- 4 Describe nutritional aspects of carbohydrates, lipids, proteins, vitamins, and minerals and their metabolism with special reference to obesity.
- 5 Understand the basics and clinical aspects of enzymes and regulation of enzymatic activity and diagnostic use of enzymes.
- 6 Describe in detail the biochemical aspects of muscle contraction.

Pre-requisite of course: A basic understanding of human biology and inorganic chemistry is often a fundamental prerequisite.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
80	0	0	25	15	10	0	0

Contents : Unit	Topics	Contact Hours
1	BIOCHEMICAL CHARACTERISTICS IF LIVING MATER Biochemistry, morphology of cell, Membrane structure and function, Functions of intracellular organs	10
2	NUCLEIC ACID DNA definition, structure, RNA definition, structure , catabolism of purines –gout	5
3	PROTEINS AND AMINO ACIDS Chemistry, definition, classification of amino – acids, protein, Metabolism, digestion and absorption, decarboxylation, deamination, transmethylation, transamination and their importance and detoxification of ammonia including urea cycle. , Neurotransmitters & Plasma proteins including immunoglobulins, Hemoglobin, Myoglobin, their functions, Haemoglobinopathies, thalassemias, Structural proteins: Collagen, Elastin	5
4	ENZYMES Definitions, classification, factors, Coenzymes, Inhibition and type of inhibitors, Isoenzymes, Clinical and therapeutic uses of enzymes	5
5	CARBOHYDRATES Chemistry, definition, classification with examples, Function of mucopolysaccharide, Reducing properties of sugars of clinical and diagnostic importance (eg: Benedict's test, Barfoed's test, etc), Metabolism, digestion and absorption of carbohydrates, glycosis – aerobic and anaerobic, energetics and regulation, Krebs's cycle, its energetics regulation Gluconeogenesis, Hormonal regulation of blood sugar level and diabetes mellitus	5
6	LIPIDS Chemistry, definition, classification and function, Metabolism, digestion and absorption of lipids, beta oxidation of fatty acids and its energetics regulation of fat metabolism in adipose tissue, ketone bodies formation and its utilization, cholesterol and importance of lipoproteins.	5
7	VITAMINS Definition, classification, functions, Deficiency symptoms, RDA	5
8	HORMONES HORMONES	5

Contents : Unit	Topics	Contact Hours
9	METABOLISM Introduction of metabolism, Metabolism of carbohydrates, Lipid & amino acids	5
10	NUTRITION Importance of nutrition, nutritional aspects of Carbohydrates, Proteins, Fats and Fibers, Classification of fibers, calorimetry, energy values, respiratory quotient, BMR, PEM, Balanced diet	5
11	BC OF CONNECTIVE TISSUE, NERVE, MUSCLE TISSUE Biochemistry of connective tissues, Biochemistry of nerve tissue and muscle	5
12	WATER, ELECTROLYTE, ACID BASE BALANCE, MINERALS Phosphate, calcium and iron. Magnesium fluoride, Zinc, Copper, Selenium, Molybdenum RDA, iodine sources, absorption, transport, excretion, function and disorders., Acid – base balance, water and electrolyte balance	5
13	CHEMISTRY OF BIOLOGICAL MATERIALS Chemistry of biology materials, Biochemistry of connective tissue – Collagen, Glycoprotein, Proteo-glycans	5
14	PHYSIOCHEMICAL PHENOMENON Physicochemical Phenomenon.	5
15	COMMON PROCEDURES Liver function test, Renal function test	5
Total Hours		80

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	1
COURSE TITLE	PSYCHOLOGY
COURSE CODE	17PT0104
COURSE CREDITS	4

Objective:

- 1 To provide the understanding about various behavioral patterns of individuals, theories of development, normal and abnormal aspects of motor, social, emotional and language development, communication and interaction skills appropriate to various age groups.
- 2 To Define the term psychology and its importance in the health delivery system and gain knowledge of psychological maturation during human development and growth and alteration during the aging process.
- 3 To Understand behavioral patterns of individuals, theories of development, normal and abnormal aspects of motor, social, emotional, and language development, communication, and interaction skills appropriate to various age groups.
- 4 To Understand the importance of the psychological status of the person in the health and diseases, environmental and emotional influence on the mind and personality.
- 5 To Acquire the knowledge as to how to deal with the patient.

Course Outcomes: After completion of this course, student will be able to:

- 1 Define the term psychology and its importance in the health delivery system and gain knowledge of psychological maturation during human development and growth and alteration during the aging process.
- 2 Understand behavioral patterns of individuals, theories of development, normal and abnormal aspects of motor, social, emotional, and language development, communication, and interaction skills appropriate to various age groups.
- 3 Understand the importance of the psychological status of the person in the health and diseases, environmental and emotional influence on the mind and personality.
- 4 Acquire the knowledge as to how to deal with the patient.

Pre-requisite of course: A basic understanding of human behaviour, thoughts, emotions, and mental processes are often a fundamental prerequisite.

Supplementary Resources:

- 1 NA

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	1
COURSE TITLE	SOCIOLOGY
COURSE CODE	17PT0105
COURSE CREDITS	4

Objective:

- 1 To introduce the student to the basic sociological concepts, principles and social processes, social institutions in relation to the individual family and community and the various social factors affecting the family in rural and urban communities.
- 2 To understand the basic sociological concepts, principles and social process, social institutions about the individual family and community, and the various social factors affecting the family in the rural and urban communities in India.
- 3 To understand the various social factors affecting health and diseases.
- 4 To define the term sociology and its importance in the health delivery system.
- 5 To understand the basic sociological concepts, principles and social process, social institution in relation to the individual family and community and the various social factors affecting the family in the rural and urban communities in India.
- 6 To understanding the various social factors affecting health and diseases.
- 7 To understand the effects of disease on a patient's behaviour affected by social factors and how to deal with a patient.

Course Outcomes: After completion of this course, student will be able to:

- 1 Define the term sociology and its importance in the health delivery system.
- 2 Understand the basic sociological concepts, principles and social process, social institution in relation to the individual family and community and the various social factors affecting the family in the rural and urban communities in India.
- 3 Understanding the various social factors affecting health and diseases.
- 4 Understand the effects of disease on a patient's behaviour affected by social factors and how to deal with a patient.

Pre-requisite of course: A basic knowledge about different cultures, beliefs, and social determinants of health is often a fundamental prerequisite.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
80	0	0	25	15	10	0	0

Contents : Unit	Topics	Contact Hours
1	INTRODUCTION Meaning–definition and scope of sociology. Its relation with anthropology, psychology, social psychology and ethics, Methods of sociology–case study, social serve, questionnaire interview and opinion Methods, Importance of its study with special reference to health care professionals	10
2	SOCIAL FACTORS IN HEALTH AND DISEASE The meaning and nature of socialization, The role of social factors in health and illness	10
3	SOCIALIZATION Meaning and nature of socialization, Primary, secondary and anticipatory socialization, Agencies of socialization	10
4	SOCIAL GROUPS Concepts of social groups, Influence of formal and informal groups on health and sickness, Role of primary groups and secondary groups in the hospital and rehabilitation settings	15
5	FAMILY The family-Meaning, Definition & Function, Types & Changing family patterns., Influence of family on individual health, family and nutrition, the effect of sickness on family and psychosomatic diseases and their importance to physiotherapy.	15
6	COMMUNITY Rural community–meaning and features–health hazards of rural ties, Urban community–meaning and features–health hazards of urbanities	5
7	CULTURE AND HEALTH Concept of culture, Culture and behavior., Cultural meaning of sickness., Culture and Health Disorders	5
8	SOCIAL CHANGE Meaning of social changes, Factors of social changes, Human adaptation and social change, Social change and stress, Social change and deviance., Social change and health program, The role of social planning in the improvement of rehabilitation	2
9	SOCIAL PROBLEMS OF DISABLED Consequences of the following social problems in relation to sickness and disability, remedies to prevent this problem, Population explosion, Poverty and unemployment, Beggary, Juvenile delinquency, Prostitution, Alcoholism, Problems of women in employment	3
10	SOCIAL SECURITY Social security and social legislation in relation to disabled	2
11	SOCIAL WORKER Meaning of social work, role of a medical social worker	3

COURSE TITLE	ENVIRONMENTAL STUDIES
COURSE CODE	17PT0106
COURSE CREDITS	2

Objective:

- 1 To be aware of the environment around us and develop an understanding of sustainable development Acquire a basic scientific understanding of environmental issues and their possible solutions
- 2 To Be aware of the environment around us and develop an understanding of sustainable development Acquire a basic scientific understanding of environmental issues and their possible solutions.

Course Outcomes: After completion of this course, student will be able to:

- 1 Be aware of the environment around us and develop an understanding of sustainable development Acquire a basic scientific understanding of environmental issues and their possible solutions.

Pre-requisite of course:STUDENTS SHOULD HAVE BASIC IDEAS REGARDING ENVIROMENTAL EFFECTS ON HEALTH.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
40	0	0	0	0	0	0	0

Contents : Unit	Topics	Contact Hours
1	MULTIDISCIPLINARY NATURE OF ENVIRONMENTAL STUDIES Definition, scope and importance , Need for public awareness	5

Contents : Unit	Topics	Contact Hours
2	NATURAL RESOURCES Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forest and tribal people., Water resources: Use and over-utilization of surface and ground water, Floods, drought, conflicts over water, dams-benefits and problems., Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies, Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water Logging, salinity, case studies, Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies, Land resources: Land as a resource, land degradation, man induced Landslides, soil erosion and desertification, Role of an individual in conservation of natural resources, Equitable use of resources for sustainable lifestyles.	5
3	ECOSYSTEM Concept of an ecosystem, Structure and function of an ecosystem, Producers, consumers and decomposers. , Energy flow in the ecosystem. , Ecological succession. , Food chains, food webs and ecological pyramids. , Introduction, types, characteristic features, structure and function of the following ecosystem: • Forest ecosystem • Grassland ecosystem • Desert ecosystem • Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)	5
4	BIODIVERSITY AND ITS CONSERVATION Introduction – Definition: genetic, species and ecosystem diversity, Bio-geographical classification of India , Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values , Biodiversity at global, National and local levels. , India as a mega-diversity nation , Hot-spots of biodiversity. , Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts. , Endangered and endemic species of India , Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity	5
5	ENVIRONMENTAL POLLUTION Definition, Cause, effects and control measures of: Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, nuclear hazards, Solid waste Management: Causes, effects and control measures of urban and Industrial wastes, Role of an individual in prevention of pollution, Pollution case studies, Disaster management: floods, earthquake, cyclone and landslides	5

Contents : Unit	Topics	Contact Hours
6	SOCIAL ISSUES AND THE ENVIRONMENT From Unsustainable to Sustainable development , Urban problems related to energy , Water conservation, rain water harvesting, watershed management , Resettlement and rehabilitation of people; its problems and concerns, Case Studies , Environmental ethics: Issues and possible solutions, Climate change, global warming, acid rain, ozone layer depletion, nuclear , Accidents and holocaust. Case Studies, Wasteland reclamation, Consumerism and waste products, Environment Protection Act. l) Air (Prevention and Control of Pollution) Act. m) Water (Prevention and control of Pollution) Act n) Wildlife Protection Act o) Forest Conservation Act p) Issues involved in enforcement of environmental legislation. q) Public awareness	5
7	HUMAN POPULATION AND THE ENVIRONMENT Population growth, variation among nations. , Population explosion – Family Welfare Programme, Environment and human health, Human Rights, Value Education, HIV/AIDS, Women and Child Welfare, Role of Information Technology in Environment and human health, Case Studies.	5
8	FIELD WORK Visit to a local area to document environmental assetsriver/ forest/grassland/hill/mountain, Visit to a local polluted site- Urban/Rural/Industrial/Agricultural, Study of common plants, insects, birds, Study of simple ecosystems-pond, river, hill slopes, etc	5

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	1
COURSE TITLE	BIOMEDICAL PHYSICS
COURSE CODE	17PT0107
COURSE CREDITS	5

Objective:

- 1 To understand the concept and basic principles to know electrotherapy equipment is given under this topic. The student will be taught about physics related to electrotherapy and application on human body tissues.
- 2 To understand the physics principles & Laws of Electricity, Electromagnetic Spectrum & ultrasound.
- 3 To describe effects of environmental & man-made electromagnetic fields at the cellular level & risk factors on prolonged exposure.
- 4 To describe the main electrical supply, electric shock –precautions.
- 5 To enumerate types & production of various therapeutic electrical currents. Describe the panel diagrams of the machines.
- 6 To describe in brief, certain common electrical components such as transistors, valves, capacitors, transformers, etc. & the simple instruments used to test/calibrate these components (such as a potentiometer, oscilloscope, etc.) of the circuitry & will be able to identify such components.
- 7 To describe & identify various types of electrodes used in therapeutics, describe electrical skin resistance & the significance of various media used to reduce skin resistance.
- 8 To understand the fundamentals of physics, its relation in Physiotherapy sciences, and basic physical principles of sound, light, and heat and their application in the physiotherapy field.

Course Outcomes: After completion of this course, student will be able to:

- 1 Apply knowledge of fundamental laws of motion general physics and Apply knowledge of rotation motion and SHM to solve problems of dynamics. Interpret the fundamentals of energy and mechanical properties of matter
- 2 Apply the knowledge of acoustics and optics and its applications in various fields
- 3 Apply the concepts of kinematics of gases, heat and thermodynamics
- 4 Apply knowledge of physics in other branches of science to solve biomedical problems
- 5 Interpret the concepts of electric and magnetic field.
Recognize the importance and applications of capacitance and inductance
- 6 apply the concept of electromagnetism in the treatment.

Pre-requisite of course: TO LEARN ASPECTS OF BIOMECHANICAL PHYSICS

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
80	0	40	40	5	5	0	0

Contents : Unit	Topics	Contact Hours
1	GENERAL MECHANICS AND PROPERTIES OF MATTER Force – Definition, unit, resolution of forces, Newton’s laws of motion. Types of motion, direction and quantity of motion, Speed, Velocity, Work, Energy and Power., Force of gravity, centre of gravity, line of gravity and base. Axes and planes of movement and gravity, Reaction forces, ground reaction force, Equilibrium, determination of equilibrium of a body, Inertia, Acceleration, Momentum and Torque., Friction – force of friction, static and dynamic friction, limit of friction, friction a necessity and evil., Simple machine – Lever, mechanical advantage, angle of pull, pulley, wheel and axle, fixed and movable pulley, pendulums, elasticity, spring properties of spring., Fluid mechanics – Viscosity, definition, coefficient of viscosity, streamline and turbulent flow, effect of temperature and pressure on viscosity. Principle of Archimedes, laws of floatation, hydrostatic pressure, buoyancy, surface tension, excess pressure in spherical liquefied drop. Physical property of water.	
2	HEAT AND TEMPERATURE Heat transfer, properties of thermal radiation, Specific heat, thermal capacity, Energy conversion, I and II law of thermodynamics, physical effects of heat – expansion, evaporation, thermionic emission etc., Concept of heat and temperature, measurement of heat thermometry, thermometer. Method of measuring body temperature. Human body temperature, Biophysics of superficial heat and cold. Kirchoff’s law, Grothus’ law, Specific heat, thermal capacity, water equivalent, Newton’s law of cooling and specific heat by cooling specific heat of gases, Joule’s law of heat production. Enthalpy, entropy.	
3	WAVES AND SOUND Sound: Origin of sound, Characteristics of sound waves (Intensity of Sound, loudness, pitch and frequency, noise, echo, Superposition of Sound Waves, Producing Sound), velocity of sound in air and water, effect of temperature, pressure, density of medium, humidity, wind on sound waves., Simple Harmonic Motion Revisited: Damping and Resonance, Wave Concepts, Traveling Waves, Waves at a Boundary: Interference, Standing Waves and Resonance, Determination of velocity of sound in air, vibration of string., The Human Ear: Physiology and Function, The Doppler Effect in Sound, Ultrasound, Ultrasonic – production and its application, Piezoelectricity., Frequencies of sound waves, Infrasonic, Normal hearing band and Ultrasonics, Reflection, Refraction and Attenuation of Sound waves, Acoustic Impedance, Interference of sound waves, Resonance, Echo, Doppler effect and Fresnel and Fraunhofer zones in Ultrasonics.	

Contents : Unit	Topics	Contact Hours
4	MODERN OPTICS Electromagnetic Spectrum: Electromagnetic Radiation: Laws Governing EMR, Laws of Reflection, Refraction, Absorption, Cosine law, Attenuation, Inverse square law. Grothus law etc., Light: Emission and absorption spectra. Electromagnetic spectrum. Laws of transmission, reflection, refraction, absorption. Internal reflection and fibre optics, Interference of light. LASER and its application.	
5	ELECTRICITY AND MAGNETISM Structure of atom, Isotopes, States of matter; Compound formation- (covalent formation)., Static Electricity: Theories of Electricity, Production of Electric Charge, Characteristic of Charged body, Potential and Capacity, Potential Difference., Current Electricity: Energy sources for electricity, EMF, Resistance, Intensity, Ohm's Law, resistance in Series / Parallel, Devices for regulating Intensity (Types, Construction and working of Rheostat), Electric energy and power, Thermal Effects of Electric (Joule 's Law)., Magnetism: Nature, Type, Molecular Theory of Magnetism, Property of Magnet, Magnetic Effect of Electric Current, Electromagnets, Milli ampere meter & Voltmeter (Construction and working), Meters for measuring Ac., Capacitor / Condenser: Principles, Capacity (Measurement and factors determining), Types and Construction, Electric field, lines of force and characteristics of lines of force, Charging and discharging of the condenser, Duration of discharge, discharge through inductance, capacitive reactance and uses of condenser., Electro Magnetic Induction: Principles (Faraday's/Lenz's law), Production, Direction of Induced EMF, Strength of induced EMF, Types (Self and Mutual) and inductive reactance. Eddy Currents, Dynamo, Transformers (Functions, Types, Constrictions), Choke coil, Thermionic Valves (Diode and Triodes), Types of rectification (Half and full wave – Voltage halving and Westinghouse Bridge), Semi Conductors: Types, semiconductor diodes, Metal rectifier & Transistors, Integrated circuits (IC), Picture Circuitry boards (PCB)., Main Supply: Production of Electricity, Types, Distribution, Earthing, Types of Plugs & Switches. Fuse., Electric and electronic circuits: Oscillating circuit, Smoothing Circuit, surging circuit, CR circuit, multi vibrator circuit, faradic coils (lewis jones and smart bristow), panel diagram of electrical stimulator, Production of high frequency current by klystron, magnetron., Frequencies of Current – Low, Medium and High frequency currents and their characteristics, Biological Cell as a capacitor and resistor, frequency of current and its relation to capacitive reactance (resistance), Types of current – DC and AC, Sources of DC, Necessity for rectification of AC, Use of DC as a therapeutic current and its dangers, Electrical Skin Resistance, Electrolysis, acidic and alkaline reactions under anode and cathode, Electrolytic burns and its prevention 5, Shock: Types (Electric Shock, Earth Shock), Definition, Severity, Effects, Causes and Precautions.

COURSE TITLE	EXERCISE THERAPY-1 & SOFT TISSUE MOBILIZATION
COURSE CODE	17PT0112
COURSE CREDITS	10

Objective:

- 1 To provide knowledge about principles and effects of exercise as a therapeutic modality and will learn the techniques in the restoration of physical functions.

Course Outcomes: After completion of this course, student will be able to:

- 1 Understand the basic mechanical principles and effect of exercise, therapeutic modality in the restoration of physical function.
- 2 Describe and acquire the skills of application and demonstration of the use of various tools of the therapeutic gymnasium and various starting and derived positions.
- 3 Describe the movements and its Classification, Principles, Technique & Uses.
- 4 Describe the physiological and therapeutic effect of various movements and demonstrate in various anatomical planes.
- 5 Acquire the skills of application of various massage manipulations and describe the physiological effects, therapeutic uses, merits – demerits of the same.

Pre-requisite of course: To understand the concept of exercise science and therapeutic massage

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
120	0	160	80	10	10	80	20

Contents : Unit	Topics	Contact Hours
1	Introduction to exercise therapy Introduction to exercise therapy, medical terminology, joint movement terminology, force, pulley and its types, pulley and its types, COG, LOG, Angle of pull, springs	
2	Physiological effects and uses of exercise. Physiological effects and uses of exercise, acute effects, chronic adaptation, uses of exercises	
3	Use of apparatus in exercise therapy Use of apparatus in exercise therapy.	

Contents : Unit	Topics	Contact Hours
4	Joint movement Joint movement - Terminology, Axis, planes, levers, fundamental starting positions, muscle work, derived positions, muscle work, pelvic tilt and its muscle work	
5	Fundamental starting positions Fundamental starting positions and Muscle work, derived positions and Muscle work, Pelvic tilt	
6	Classification of movements Classification of movements, Types of Muscle work, Active movements - Definition, types, techniques, effects and uses, Free exercise, classification, Technique and effects of free exercise, free exercises - application for shoulder, neck, hip and knee joints, techniques of mobilization for stiff joints, Passive movements - Definition, types, techniques of relaxed passive movements and uses, comparison of both movements., Application of resistance to develop endurance and power, progression of exercises, angle of pull, types of muscle work, exercises - free resisted, assisted - use of gadget apparatus, Resisted Exercises - Techniques and types of resistance, , SET system (Heavy resisted exercises) Oxford method, Delorme method, Macqueen's method.	
7	Measurement of joint movements goniometry types of goniometer, bubble and gravity goniometer., Measurements of ROM of all joints, Causes of restriction of range of movement, Distinguish between skin, muscles, Capsular contractures., Capsular pattern, End feel	
8	Breathing Breathing - Mechanism of breathing (normal), , Muscles of respiration, changes in thoracic cage during process of respiration , Pursued lip breathing -- significance., Glossopharyngeal Breathing - significance	
9	Group work Group work-Criteria of selection of patients, advantages and disadvantages of group class exercises., Home exercises , Trick movements.	
10	Normal gait cycle Normal gait cycle – Phases of gait	
11	Measurement of limb length Measurement of limb length, methods of measurements.	
12	Maintenance of record Maintenance of record-volume, range of motion, resistance, limb length. Girth measurement	
13	Introduction of massage Introduction-brief history, definition	

Contents : Unit	Topics	Contact Hours
14	classification of massage classification., Physiological effects and therapeutic uses, contra - indications., Preparation of patient, basic points to be considered before and during massage procedure., Technique, effects and uses of each manipulation and contra-indications. Practice of soft tissue manipulation in subjects., Specific effects of certain manipulations, Massage for arm, Massage for leg, Massage for face, Massage for upper back, Massage for oedema, Massage for scar, Massage for tendinitis, Massage for fibrosis (tight fascia), Mobilization of soft tissues, Mobilization of joints , Mobilization for fluid collection.	
15	suspension therapy introduction, types,apparatus	
Total Hours		

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
1	Suspension therapy Suspension therapy - definitions of suspension and point of suspension, types of suspension, pulleys and use of pulleys in suspension therapy, application of suspension therapy either to increase the joint range or to increase muscle power.	
2	Crutch walking Crutch walking - Types of crutch walking, Use of parallel bars in pre-crutch walking stage, balance exercises for crutch walking, phase of walking, gait training, group of muscles responsible during crutch walking., Progression in crutch walking, measurement of crutches, walking aids canes, walkers, tripods , types of crutches, crutch - walking on even surface, slopes, climbing up the stair case.	
3	measurement of joint ROM upper limb ROM , spinal ROM, lower limb ROM	
4	study tour/visit visit to physiotherapy center, visit to geriatric home, physiotherapy camp	
5	starting and derived positions starting positions, derived positions	
6	active exercises free exercises, assisted exercises, resisted exercises	

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
7	techniques of massage preparation of patient, basic points to be considered before and during massage, techniques, effects and uses of each manipulation and contra indications. Practice of soft tissue manipulations in subjects., specific effect of certain manipulations, massage of arms, leg, neck, upper back, face, massage for oedema, scar, tendinitis, fibrosis (tight fascia), mobilization of soft tissues, joints and fluid collection.

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	2
COURSE TITLE	PATHOLOGY
COURSE CODE	17PT0201
COURSE CREDITS	4

Objective:

- 1 Pathophysiology is the study of causes of diseases and reactions of the body to such disease producing causes. This course is designed to impart a thorough knowledge of the relevant aspects of pathology of various conditions with reference to its pharmacological applications, and understanding of basic pathophysiological mechanisms. Hence it will not only help to study the syllabus of pathology, but also to get baseline knowledge required to practice medicine safely, confidently, rationally and effectively.
- 2 To acquire the knowledge of concepts of cell injury and changes produced thereby in different tissues and organs; capacity of the body in healing process
- 3 To recall the etio-pathogenesis, the pathological effects and the clinico-pathological correlation of common infection and non infectious disease
- 4 To acquire the knowledge of concepts of neoplasia with reference to the etiology, gross and microscopic features, diagnosis and prognosis in different tissues and organs of the body
- 5 To correlate normal and altered morphology of different organ systems in different diseases needed for understanding disease process and their clinical significance (with special emphasis to Neuro-Musculoskeletal and Cardio Vascular -Respiratory systems)
- 6 To acquire knowledge of common immunological disorders and their resultant effects on the human body
- 7 To understand in brief, about the hematological diseases and investigations necessary to diagnose them and determine their prognosis.

Course Outcomes: After completion of this course, student will be able to:

- 1 Acquire the knowledge of concepts of cell injury and changes produced thereby in different tissues and organs; capacity of the body in healing process
- 2 Recall the etio-pathogenesis, the pathological effects and the clinico-pathological correlation of common infection and non infectious disease
- 3 Acquire the knowledge of concepts of neoplasia with reference to the etiology, gross and microscopic features, diagnosis and prognosis in different tissues and organs of the body
- 4 Correlate normal and altered morphology of different organ systems in different diseases needed for understanding disease process and their clinical significance (with special emphasis to Neuro-Musculoskeletal and Cardio Vascular -Respiratory systems)
- 5 Acquire knowledge of common immunological disorders and their resultant effects on the human body
- 6 Understand in brief, about the hematological diseases and investigations necessary to diagnose them and determine their prognosis.

Pre-requisite of course: A basic understanding of human anatomy and physiology is often a fundamental prerequisite.

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	2
COURSE TITLE	MICROBIOLOGY
COURSE CODE	17PT0202
COURSE CREDITS	4

Objective:

- 1 To have sound knowledge of the agents responsible for causing human infections, pertaining to CNS, CVS, Musculo-skeletal and Respiratory system.

Course Outcomes: After completion of this course, student will be able to:

- 1 Have sound knowledge of the agents responsible for causing human infections, pertaining to CNS, CVS, Musculo-skeletal and Respiratory system.

Pre-requisite of course: A basic understanding in biology is usually a prerequisite for microbiology. This may include courses in general biology, cell biology, and genetics.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
80	0	0	25	15	10	0	0

Contents : Unit	Topics	Contact Hours
1	General Bacteriology Introduction, historical background, Basics of morphology and physiology of bacteria, Staining of bacteria, Sterilization and disinfection, Cultivation and culture media	10
2	Systemic Bacteriology Gram positive cocci: Staphylococci, Streptococci and Pneumococci, Gram negative cocci: Gonococci and Meningococci, Gram negative bacilli: Typhoid, Cholera, Dysentery, Gram positive bacilli: Aerobic: Diphtheria, Tuberculosis, Leprosy, Syphilis - Anaerobic: Tetanus, Gas gangrene, Botulism	15
3	General Virology Poliomyelitis, Rabies, Introduction to Blood born Viral infection, Demonstration of tests: Diagnosis of AIDS, hepatitis B & C, Corona, Herpes	10
4	Immunology Immunity, Antigen and Antibodies, Agglutination, Precipitation, Basic of hypersensitivity reactions	10

Contents : Unit	Topics	Contact Hours
5	Parasitology Introduction to important parasitic infections, Malaria, Amoebiasis, Round worm and hook worm	10
6	Mycology Introduction to important fungal infections, Candidiasis, Ring worm, Scabies	5
7	Applied Microbiology Infection of bones / joints, Infection of burns case, Serological test – interpretation of ASO, RA, VDRL, CRP, Widal, ELISA (HIV, HB sag), Demonstration gross / microscopic appearance of various parasites	10
8	Aseptic universal precautions & practices Biomedical waste and universal precautions	5
9	PRACTICALS: (Demonstration only) Staining, Microscopy, Sterilization, Media, Stool sample, Serology tests	5
Total Hours		80

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	2
COURSE TITLE	PHARMACOLOGY
COURSE CODE	17PT0203
COURSE CREDITS	4

Objective:

- 1 Describe pharmacological effects of commonly used drugs by patients referred for physiotherapy; list their indications adverse reactions, precautions to be taken and contraindications
- 2 Identify whether the pharmacological effect of the drug interferes with the therapeutic response of physiotherapy and vice-versa
- 3 Indicate the use of analgesics and anti-inflammatory agents with special reference to movement disorders focusing on consideration of efficacy and safety for individual needs
- 4 Get the awareness of other essential and commonly used drugs by patients, and the bases for their use and common as well as serious adverse reaction
- 5 To apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
- 6 To understand the concepts of general pharmacology.
- 7 To understand the pharmacological actions of different categories of drugs.
- 8 To explain the mechanism of drug action at the organ system/subcellular/ macromolecular levels.
- 9 To apply the basic pharmacological knowledge in the prevention and treatment of various diseases.
- .
- 10 To understand the adverse effects, contraindication of drugs.
- 11 To understand the concepts of general pharmacology
- 12 To understand the pharmacological actions of different categories of drugs
- 13 To explain the mechanism of drug action at the organ system/subcellular/ macromolecular levels
- 14 To apply the basic pharmacological knowledge in the prevention and treatment of various diseases
- 15 To understand the adverse effects, contraindication of drugs

Course Outcomes: After completion of this course, student will be able to:

- 1 Understand the concepts of general pharmacology
- 2 Understand the pharmacological actions of different categories of drugs
- 3 Explain the mechanism of drug action at the organ system/subcellular/ macromolecular levels
- 4 Apply the basic pharmacological knowledge in the prevention and treatment of various diseases

Course Outcomes: After completion of this course, student will be able to:

- 5 Understand the adverse effects, contraindication of drugs

Pre-requisite of course: A good understanding of applied human anatomy and applied physiology is important and a background in chemistry is required.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
80	0	0	25	15	10	0	0

Contents : Unit	Topics	Contact Hours
1	General Principles Introduction and scope of pharmacology (definitions), sources of drugs , Routes of drug administration , Pharmacokinetics: drug absorption and bioavailability, drug distribution, drug metabolism, drug excretion, biological half life ($t_{1/2}$) and steady state concentration etc. , Pharmacodynamics: site of drug action, mechanism/s of drug action including receptor concept , Adverse drug reactions and drug interactions – pharmacovigilance , Factors influencing drug actions, dosage etc , Concepts of essential drugs and rational drug therapy	5
2	Drug acting on peripheral nervous system (autonomic nervous system) Adrenergic agonists and antagonists , Cholinergic agonists and antagonists , Skeletal muscle relaxants	5
3	Autacoids and related drugs Histamine and antihistaminic drugs , 5-HT and antagonists, ACE inhibitors and angiotensin, antagonists , Prostaglandins, Nonsteroidal anti-inflammatory drugs (NSAIDs), Drug therapy of Rheumatoid arthritis, Gout, Osteoarthritis etc.	10
4	Drugs for respiratory disorders Drug therapy of cough , Drug therapy of common respiratory infections: pharyngitis, tonsillitis, sinusitis, laryngitis etc. , Drug therapy of bronchial asthma, COPDs – effect of long term administration of such drugs	10
5	Drugs for cardiovascular diseases . Drugs used in management of hypertension , Angina pectoris, congestive heart failure, cardiac arrhythmias, shock etc. , Diuretics	5
6	Drugs used in central nervous system (CNS) disorders Introduction to CNS pharmacology , Alcohol , Sedatives and hypnotics, antianxiety drugs , Antiepileptic drugs , Opioid analgesics , Antidepressants, antipsychotics , General and local anaesthetic agents , Drug abuse , Drugs used in treatment of parkinsonism	10
7	Insulin and other antidiabetic drugs Insulin and other antidiabetic drugs	5

Contents : Unit	Topics	Contact Hours
8	Drugs affecting calcium metabolism Drugs used in the treatment of osteoporosis, Glucocorticosteroids and anabolic steroids	5
9	Chemotherapy General principles and classification , Antitubercular drugs , Antileprosy drugs	5
10	Other chemotherapeutic drugs Antibacterial drugs: Sulfonamides, cotrimoxazole, fluoroquinolones, beta lactam antibiotics, aminoglycosides, tetracyclines, chloramphenicol, macrolide antibiotics, misc. antibiotics	5
11	Endocrine pharmacology Thyroid and antithyroid drugs, Female sex hormones	5
12	Drugs used in gastro intestinal disorders Diarrhea, Vomiting, Constipation, Peptic ulcer	5
13	Miscellaneous drugs Drugs used in management of anemia , Immunomodulators, vaccines and sera	5
Total Hours		80

Suggested Theory Distribution:

The suggested theory distribution as per Bloom's taxonomy is as follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation

Remember / Knowledge	Understand	Apply	Analyze	Evaluate	Higher order Thinking / Creative
20.00	30.00	25.00	15.00	10.00	0.00

Instructional Method:

- 1 Classroom Teaching - Theory

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	2
COURSE TITLE	KINESIOLOGY
COURSE CODE	17PT0204
COURSE CREDITS	6

Objective:

- 1 Acquire the skill of assessment of isolated and group muscle strength subjectively and objectively.
- 2 To use these methods for evaluation and treatment of disorders of the Musculoskeletal system.
- 3 To analyze normal human movement from a global perspective, integrating biomechanics, force, muscle mechanics and motor control theory.
- 4 To experience quantitative methods of movement analysis using various methods.
- 5 To apply the analytic methods to specific examples of normal human motor performance.
- 6 To use these methods for evaluation and treatment of disorders of the Musculoskeletal system
- 7 To apply the analytic methods of different muscles and its effects on specific joints in the human body.
- 8 To acquire the knowledge about locomotion and its kinetic -kinematic analysis.

Course Outcomes: After completion of this course, student will be able to:

- 1 Analyze normal human movement from a global perspective, integrating biomechanics, force, muscle mechanics and motor control theory.
- 2 Experience quantitative methods of movement analysis using various methods.
- 3 Apply the analytic methods to specific examples of normal human motor performance.
- 4 Use these methods for evaluation and treatment of disorders of the Musculoskeletal system.
- 5 Apply the analytic methods of different muscles and its effects on specific joints in the human body.
- 6 Acquire the knowledge about locomotion and its kinetic -kinematic analysis.

Pre-requisite of course: An in-depth knowledge of human anatomy and physiology is crucial for kinesiology, and an understanding of basic physics & fundamentals of exercise therapy, especially mechanics and forces, is required.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
120	0	0	25	15	10	0	0

Contents : Unit	Topics	Contact Hours
1	General bio-mechanics General bio-mechanics: Kinematics and Introduction to Kinetics, Description of motion (Kinematics) Types of motion, laws of motion, location of motion, direction of motion, magnitude of motion, Analysis of force (Kinetic) Definition of force, magnitude of force, point of application, direction of force, Components of force, composite effects of two or more forces, torque, Force of friction, force of inertia, force of gravity, equilibrium, Work 1. Lever: definition, orders of lever, anatomical lever, levers in Physiotherapy 2. Anatomical pulley, anatomical wheel & axis, Principles of stability Base of support, height, mass of body, the impact of forces (e.g. Gravity), segmentation, visual factors, psychological factors, physiological factors, Mechanism of joint motion a) Types of joints, structure of joints, joint function and motion, Materials Used in Human Joints b) General Properties of Connective Tissue c) General Changes with Disease, Injury, Immobilization, Exercise, and Overuse on joints, Mechanics of muscle action Classification of muscle, functional characteristics of muscle, line of pull, length-tension relationship, types of muscle contractions, group action of muscles, angle of pull, action of two joint muscle, Effects of Immobilization, Injury, and Aging on muscle	15
2	Skilled Movements Rope climbing, cycling, running, ballistic and volitional movements	5
3	Impetus Impetus to external objects and receiving impetus	2
4	Locomotion Normal gait analysis: definition of gait, phases of normal gait, normal gait with kinetic and kinematics, abnormal pathological gaits, gait training	5
5	Biomechanics of joints Kinetics, kinematics and patho-mechanics of joint – hip , Kinetics, kinematics and patho-mechanics of joint – knee, Kinetics, kinematics and patho-mechanics of joint – ankle and foot complex, Kinetics, kinematics and patho-mechanics of joint – shoulder, Kinetics, kinematics and patho-mechanics of joint – elbow, Kinetics, kinematics and patho-mechanics of joint – wrist and hand complex, Kinetics, kinematics and patho-mechanics of – TM joint	70
6	Biomechanics of spinal column Spinal curves, articulations of spinal column joints, non contractile soft tissue of column, IV disc, ligaments, movements of spinal column and muscle mechanics, intrinsic equilibrium of spine	5
7	Biomechanics of pelvic complex Pelvis at rest, in standing body and in motion, patho mechanics of pelvis	5
8	Biomechanics of thorax Movements between ribs and vertebrae, sternum and ribs, patho mechanics of respiration	3

Contents : Unit	Topics	Contact Hours
9	Postural strain and occupational hazards use of body mechanics at home, at school and work, recreation, particular application of body mechanics for patients, physiotherapists and other staff.	5
10	Kinetics and kinematics of ADL Supine to sitting, Sitting to standing, Squatting, Climbing up and down, pushing, pulling, overhead activities, walking, running, jogging.	5
Total Hours		120

Suggested Theory Distribution:

The suggested theory distribution as per Bloom's taxonomy is as follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember / Knowledge	Understand	Apply	Analyze	Evaluate	Higher order Thinking / Creative
20.00	30.00	25.00	15.00	10.00	0.00

Instructional Method:

- 1 Classroom teaching - Theory

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	2
COURSE TITLE	ELECTROTHERAPY
COURSE CODE	17PT0205
COURSE CREDITS	9

Objective:

- 1 To recall the Physics – Principles and laws of electricity, Shock, Electromagnetic spectrum, Ultrasound
- 2 To acquire an ability to select the appropriate mode as per the tissue specific and area specific application.
- 3 To describe and identify various types of electrodes used in therapeutics, resistance offered by the skin and significance of various media used to reduce the same
- 4 To describe the production, physiological effects, therapeutic uses, merits/ demerits, indications and contraindication of various Low, Medium and High frequency currents and modes. Describe the panel diagrams of the machine
- 5 To acquire the skill of application of Low, Medium and High frequency currents on models for the purpose of treatment
- 6 To describe the physiological effects and therapeutic uses of various therapeutic ions to be used for the application of Iontophoresis

Course Outcomes: After completion of this course, student will be able to:

- 1 Recall the Physics – Principles and laws of electricity, Shock, Electromagnetic spectrum, Ultrasound
- 2 Acquire an ability to select the appropriate mode as per the tissue specific and area specific application.
- 3 Describe and identify various types of electrodes used in therapeutics, resistance offered by the skin and significance of various media used to reduce the same
- 4 Describe the production, physiological effects, therapeutic uses, merits/ demerits, indications and contraindication of various Low, Medium and High frequency currents and modes. Describe the panel diagrams of the machine
- 5 Acquire the skill of application of Low, Medium and High frequency currents on models for the purpose of treatment
- 6 Describe the physiological effects and therapeutic uses of various therapeutic ions to be used for the application of Iontophoresis

Pre-requisite of course: At the end of the course the candidate will be able to 1. Recall the Physics – Principles and laws of electricity, Electromagnetic spectrum, Ultrasound 2. Describe the electrical main supply, Electric shock – precautions 3. Describe and identify various types of electrodes used in therapeutics, resistance offered by the skin and significance of various media used to reduce the same 4. Describe the production, physiological effects, therapeutic uses, merits/ demerits, indications and contraindication of various Low, Medium and High frequency currents and modes. Describe the panel diagrams of the machine 5. Acquire the skill of application of Low, Medium and High frequency currents on models for the purpose of treatment 6. Describe the physiological effects and therapeutic uses of various therapeutic ions to be used for the application of Iontophoresis 7. Describe effects of electromagnetic field at the cellular level and risk factors on prolonged exposure 8. Describe the physiological effects and therapeutic uses of various topical pharmacotherapeutic agents to be used for the application of phonophoresis 9. Acquire an ability to select the appropriate mode as per the tissue specific and area specific application.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
120	0	120	80	10	10	80	20

Contents : Unit	Topics	Contact Hours
1	LOW FREQUENCY CURRENTS Faradic Current: Definition, characteristic and modified faradic current, sinusoidal current, parameters of faradic stimulation, physiological and therapeutic effects of faradic-stimulation. Indication, contra-indications and precautions, techniques of stimulation- group muscle stimulation, faradic foot bath, faradism under pressure and pelvic floor muscle re-education, Interrupted Direct Current: Introduction & characteristics, Parameters of stimulation, physiological and therapeutic uses of stimulation, precautions, Galvanic Current: Introduction & characteristics, Parameters of stimulation, physiological and therapeutic uses of stimulation, precautions, Iontophoresis: Definition, principles of iontophoresis, physiological and therapeutic uses, indications, techniques of iontophoresis, principles of treatment, contraindications and dangers, TENS: Definition, types, Theories of pain modulation emphasizing on “Pain gate” theory, techniques of treatment, indication and contra –indications	
2	MEDIUM FREQUENCY CURRENT Interferential current: Definition, characteristics, physiological & therapeutic effects of Interferential current, techniques of application, indications, contraindications and precautions, Introduction to Russian current, Dia-dynamic current, HVPGS and Micro currents	

Contents : Unit	Topics	Contact Hours
3	HIGH FREQUENCY CURRENT Short Wave Diathermy (SWD): Introduction, physiological effects and Therapeutic effects of SWD, methods of application (capacitor field method and cable method etc.) Techniques of treatment, indication, contra-indications and dangers., Pulsed SWD: Definition, characteristics, mechanism of work, physiological effects and therapeutic effects, indications, techniques of application, principles of treatment and contra-indications, Ultrasonic Therapy: Introduction and characteristics, Ultrasound Therapy parameters, coupling media, therapeutic effects, indications contra-indications and dangers, testing of apparatus, techniques of application & dosage, Phonophoresis, Electromagnetic waves: Electromagnetic spectrum, physical properties of electromagnetic radiations-reflection, refraction, absorption penetration, Grothus' law, Cosine law, Inverse square law and its practical application, Cellular bio-physics – reception and emission of electromagnetic signals Environmental currents and fields – risk factors on prolonged exposure to electromagnetic field, Infra Red Rays (IRR): Production of infra red rays, luminous and non – luminous generators, penetration, technique of application, physiological effects and therapeutic uses of infra-red rays, duration and frequency of treatment, indications and contra indications, dangers and precautions., Ultra Violet Rays(UVR): Production of UVR, test dose, physiological effects of UVR dosimetry in UVR. PUVA, LASER: Introduction and characteristics, effects on tissue, therapeutic effects, principles of application, indications, contraindications and dangers, Microwave Diathermy (MWD): Introduction and characteristics, physiological effects, therapeutics effects, techniques of application and principles of treatment, indications, contra-indications and dangers	
4	ELECTRODIAGNOSIS Faradic-Galvanic (FG) Test, Strength Duration (SD)Curve: Methods of Plotting SD Curve, Apparatus selection, Characters of Normally innervated Muscle, Characters of Partially Denervated Muscle, Characters of Completely denervated Muscle, Chronaxie & Rheobase, Nerve conduction velocity studies: Introduction, physiology and basics of its application and uses, Electromyography (EMG): Introduction, physiology and basics of its application and uses	
5	BASICS OF ELECTROTHERAPY Review of physics: Current, electricity, Ohm's law, Resistance, Rheostats, potentiometer, Electromagnetic induction, capacitors, valves, semiconductors and transistors , Nerve Muscle Physiology: Resting potential, action potential, propagation of action potential, motor unit, synapse and synaptic transmission of impulses. Effect of negative and positive electrodes on nerve & accommodation , Electric shock: Causes, severity, treatment and precautions Earth shock and its precautions	

Contents : Unit	Topics	Contact Hours
6	SUPERFICIAL HEATING AND CRYOTHERAPY Superficial heating modalities: Structure of the apparatus, composition of wax and mineral oils physiological effects and therapeutic uses of wax bath, technique of application, Other Heating Modalities: Heating pad, moist heat and fluidotherapy: Construction, Method of application, Therapeutic uses, Indications & Contraindications, Cryotherapy: Define- Cryotherapy, Principle- Latent heat of fusion, Physiological & Therapeutics effects, Techniques of Applications, Indications & Contraindications, Dangers, Methods of application with dosages, Contrast Bath: Methods of application, Therapeutic uses, Indications & Contraindications	
7	RECENT ADVANCES Computerization in electrotherapy, Programming of parameters of treatment, appropriate selections of parameters and combination therapy, Combination therapy: Principles, therapeutic uses and indications like, Ultrasound therapy with stimulation or Trans-Cutaneous Electrical Nerve Stimulation (TENS) etc, Advanced Therapies: High intensity laser, Shockwave, PEME (Pulsed Electromagnetic Energy), Variable Muscle Stimulation, Spinal Decompression, Pneumatic Compression therapy, Functional Electrical Stimulation (FES), Virtual Reality Training, Biofeedback: Introduction, principles of Biofeedback, therapeutic effects of biofeedback, Indications and contra-indications, techniques of treatment	
Total Hours		

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
1	LOW FREQUENCY CURRENTS PRACTICALS Galvanic, Interrupted Galvanic, Iontophoresis, Faradic, Surge Faradic, Special techniques, TENS	
2	MEDIUM FREQUENCY CURRENTS PRACTICAL IFT, Russian and other Currents	
3	HIGH FREQUENCY CURRENT PRACTICALS SWD, Pulsed SWD, Ultrasound, Ultraviolet Radiation, Infrared Radiation, LASER	
4	ELECTRODIAGNOSIS PRACTICALS FG Test, SD Curve	
5	SUPERFICIAL HEATING AND CRYOTHERAPY PRACTICALS Wax bath, Moist heat, Cryotherapy and cold packs

- 1 Theory + Practical

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	2
COURSE TITLE	EXERCISE THERAPY
COURSE CODE	17PT0206
COURSE CREDITS	9

Objective:

- 1 To describe the biophysical properties of connective tissue and the effect of biomedical loading and factors which influence the muscle strength and mobility of articular and periarticular soft tissue.

Course Outcomes: After completion of this course, student will be able to:

- 1 Students will be able to Describe the biophysical properties of connective tissue and the effect of biomedical loading and factors which influence the muscle strength and mobility of articular and periarticular soft tissue.
- 2 Students will acquire the skill of assessment of isolated & group muscle strength, & Range of motion of the joints subjectively & objectively
- 3 Students will be able to analyze normal human posture and its associated problems, its management.
- 4 Students will be able to describe and demonstrate various therapeutic exercise with its technique: including chest P.T. on self and also acquire the skill of application on model.
- 5 Students will be able to demonstrate general fitness, exercise and shall gain fitness for oneself

Pre-requisite of course: At the end of the course the candidate will be able to 1. Describe the biophysical properties of connective tissue and the effect of biomedical loading and factors which influence the muscle strength and mobility of articular and periarticular soft tissue. 2. Acquire the skill of assessment of isolated & group muscle strength, & Range of motion of the joints subjectively & objectively 3. To demonstrate general fitness, exercise and shall gain fitness for one self

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
120	0	120	80	10	10	80	20

Contents : Unit	Topics	Contact Hours
1	Passive movements Passive movements, comparison of active with passive movements for all joints of extremities, neck and trunk., • CPM unit Definition, method of application, indications, contraindications and precautions	
2	Mobilization causes of restriction of R.O.M, prevention of restrictions, types of motion; stretching, glides, compression, traction, indications, contraindications, precautions and conditions for special precautions., techniques of mobilization of various joints of limbs , manipulation-definition and different types	
3	Advance soft tissue Mobilization Basic principles of MET (Muscle Energy Techniques), MFR (Myofascial Release Technics), PRT (Positional Release Therapy), NTM (Neural Tissue Mobilization)	
4	M.M.T. (Manual Muscle Testing) need of M.M.T, uses of MMT, fundamental principles of MMT,principles of isolation, substitution, stabilization,anatomical and physiological basis, Oxford scale of muscle gradation, grading procedure for muscles of upper limb, grading procedure for muscles of lower limb, grading procedure for muscles spine and trunk, grading procedure for muscles of face, Voluntary control of movement gradation by Bobath, Brunnstrom.	
5	Posture definition,types and factors influencing posture, regulation of posture and posture mechanism, pelvic tilt and postural deviations of spine, Treatment of postural deviation by Crawling exercises: principles, types, effects and uses of Clapp' crawl	
6	Resisted Exercise (PRE) /Strengthening of muscles definition and principles for resisted exercise, effects and uses of resisted exercise to prevent muscle wasting and other purposes, types of resisted exercise, use of equipment for resisted exercise, progressive resisted exercise , use of manual and mechanical resistance for strengthening, plyometric exercise, indication,technique and contra indication of it., Dynamic exercise: Concentric and eccentric, dynamic exercise- constant versus variable resistance, isokinetic exercise, Open chain and closed chain exercise, De Lormes, Oxford, Mac Queen, circuit weight training, Multiple angle isometrics, isokinetic regimens, practice of strengthening of muscles of limbs, neck, trunk and face, emphasis on hand and foot muscles, quadriceps, glutei, triceps, deltoid and face muscles, Rood's technique of initiating muscle contraction, reeducation of muscles and restoration of functions	

Contents : Unit	Topics	Contact Hours
7	Proprioceptive Neuromuscular Facilitation Introduction, uses, different types and basis techniques, techniques of PNF patterns of arm, techniques of PNF patterns of leg, techniques of PNF patterns of head and trunk, specialised technique of PNF, repeated contractions – slow reversal, contract and relax, hold and relax, rhythmic stabilization, inhibitory techniques, Bobath Rood's and Kabat	
8	Relaxation definition, of relaxation, Muscle tone, postural tone, uses and effects of relaxation, types of it, general relaxation techniques, local relaxation techniques	
9	Neuro-Muscular coordination: definition and factors affecting it, principles of re education, Frenkel's exercises and its techniques	
10	Functional Reeducation what is mat exercise, its uses and effects, Mat activities for re education of hemiplegics, Mat activities for re education of paraplegic patients, Mat activities for re education of cerebral palsy patients, walking re education in neurological and orthopedic conditions.	
11	Aerobic exercises what is aerobic exercise, different terminology endurance, strength, vo2 max, fitness, different energy system and its contribution for providing energy, Physiological effects and therapeutic uses of aerobic exercise, fitness testing, stress testing types, indication and contra indication, technique, uses,, Pharmacological aspects of exercises.	
12	Breathing exercises Mechanisms of normal breathing, muscles of respiration, changes in thoracic cage during the process of respiration, diaphragmatic breathing exercises, segmental breathing exercises, pursed lip breathing, postural drainage, different types of postural drainage, technique, indication, contra indication, uses and effects of PD, Mobilization of thoracic cage, strengthening exercise of respiratory muscle and its techniques /Inspiratory resistive device	
13	Hydrotherapy Physiological properties of water and hydrodynamics, uses of hydro therapy for the muscle strengthening exercise, physiological and applications of Bad Ragaz Technique, indications and contraindications	
14	Stretching Definitions related to stretching, indications and aims of stretching, principles and contraindications, types of contractures and differentiation properties of soft tissues affecting elongation and aims of stretching, manual and mechanical stretching, cycle mechanical stretching, Traction: types, effects and principles, application of traction for cervical and lumbar spine, traction to soft tissues of joints	

Contents : Unit	Topics	Contact Hours
15	Balance Back ground and concept, Key Terms and Definitions, Balance Control, Sensory Systems and Balance Control, Motor Strategies for Balance Control, Balance Control under Varying Conditions, , Sensory Input Impairments Sensorimotor Integration, Biomechanical and Motor Output Deficits, Deficits with Aging, Deficits from Medications , Examination and Evaluation of Impaired Balance , Balance Training , Health and Environmental Factors affecting balance	
16	Therapeutic Exercise: Foundational Concepts Definition of Therapeutic Exercise, Aspects of Physical Function: Definition of Key Terms, Types of Therapeutic Exercise Intervention Exercise Safety, The Disablement Process, Models of Disablement, Use of Disablement Models and Classifications in Physical Therapy	
17	Proprioceptive neuro-muscular facilitation Diagonal pattern for upper limb, lower limb and girdle, Special techniques in PNF	
18	Passive movement Upper limb, lower limb, Trunk	
19	Mobilisation Upper Limb, Lower Limb	
20	Functional re-education Re-education- Hemiplegic, Peraplegic and Cerebral Palsy Patients, Walking Re-education in Neuro and Ortho Patients

1	PD nebulization, PD FOR UPPER LOBE, PD FOR MIDDLE LOBE, PD FOR LOWER LOBE	
2	Stretching Stretching for upper limb, stretching for lower limb, stretching for spine	
3	Coordination Non equilibrium test, Equilibrium test, Frenkel's exercise	
4	Balance Balance assessment, Balance training	
5	Posture Postural assessment and postural deviations	
6	Breathing Exercise Diaphragmatic breathing exercise, Segmental breathing exercise, Pursed lip breathing exercise	

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
7	Relaxation General relaxation, Local relaxation	
8	Strengthening Manual strengthening, Mechanical strengthening	
9	MMT Upper limb muscles, Lower limb muscles, Trunk Muscle, Facial Muscle	
10	Mobilization Mobilization of shoulder girdle, Mobilization of elbow, Mobilization of wrist and finger, Mobilization of Hip, Mobilization of knee, Mobilization of foot and ankle	
Total Hours		

Suggested Theory Distribution:

The suggested theory distribution as per Bloom's taxonomy is as follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember / Knowledge	Understand	Apply	Analyze	Evaluate	Higher order Thinking / Creative

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	2
COURSE TITLE	PSYCHIATRY
COURSE CODE	17PT0207
COURSE CREDITS	2

Objective:

- 1 Enumerate various psychiatric disorders with special emphasis to movement, pain and ADL & describe the various causative factors and methods of assessment and management
- 2 To describe various psychiatric disorders with special emphasis on movement/pain and ADLs and describe the methods of assessment and management.
- 3 To acquire the knowledge as to how to deal with the patient.
- 4 To enumerate various psychiatric disorders with special emphasis to movement, pain and ADL & describe the various causative factors and methods of assessment and management.
- 5 To acquire the knowledge in brief about the pathological and etiological factors, common signs and symptoms and management of various psychiatric conditions.
- 6 To describe in brief the various treatment modalities commonly used.

Course Outcomes: After completion of this course, student will be able to:

- 1 Enumerate various psychiatric disorders with special emphasis to movement, pain and ADL & describe the various causative factors and methods of assessment and management
- 2 Acquire the knowledge in brief about the pathological and etiological factors, common signs and symptoms and management of various psychiatric conditions
- 3 Describe in brief the various treatment modalities commonly used.

Pre-requisite of course: A good understanding of human psychology is essential for Psychiatry.

Teaching and Examination Scheme

The suggested theory distribution as per Bloom's taxonomy is as follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember / Knowledge	Understand	Apply	Analyze	Evaluate	Higher order Thinking / Creative
20.00	30.00	25.00	15.00	10.00	0.00

Instructional Method:

- 1 Classroom teaching - Theory

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	2
COURSE TITLE	RADIOLOGY/ENT/OPHTHALMOLOGY
COURSE CODE	17PT0208
COURSE CREDITS	2

Objective:

- 1 To identify the differences between normal and abnormal X rays of extremities, spine and chest and also in specific conditions like OA
- 2 To understand other radio imaging techniques like MRI, CT, USG etc
- 3 To apply the use of interpretation of radiography findings for assessment and treatment of the patients.
- 4 To describe the anatomy and physiology of hearing and the use of audiometry in the assessment of hearing and understand diseases of E.N.T. emphasis on otitis media, Bell's palsy, sinusitis and rhinitis.
- 5 To describe Common eye diseases, vitamin A deficiency, Eye lesion in leprosy and disorders of ocular movements in myasthenia gravis, progressive supranuclear palsy and lower motor neuron diseases.

Course Outcomes: After completion of this course, student will be able to:

- 1 Identify the differences between normal and abnormal X rays of extremities, spine and chest and also in specific conditions like OA
- 2 Understand other radio imaging techniques like MRI, CT, USG etc
- 3 Apply the use of interpretation of radiography findings for assessment and treatment of the patients.
- 4 Describe the anatomy and physiology of hearing and the use of audiometry in the assessment of hearing and understand diseases of E.N.T. emphasis on otitis media, Bell's palsy, sinusitis and rhinitis
- 5 Describe Common eye diseases, vitamin A deficiency, Eye lesion in leprosy and disorders of ocular movements in myasthenia gravis, progressive supranuclear palsy and lower motor neuron diseases.

Pre-requisite of course: Identify common chest conditions together with basic traumatic, infective, inflammatory and degenerative conditions and bony skeletal 2. Read CT, MRI of different joints At the end of the course the candidate will be able to: Identify common ear, nose, throat conditions At the end of the course, the students will be able to 1. Acquire knowledge of structure and function of the eye 2. Describe etiology, patho-physiology, sign and symptoms and clinical evaluation of common ophthalmic conditions related to Physiotherapy

COURSE TITLE	ETHICS
COURSE CODE	17PT0209
COURSE CREDITS	2

Objective:

- 1 To be able to understand the moral values and meaning of ethics
- 2 To acquire bedside manners and communication skills in relation with patients, peers seniors and other professionals.
- 3 To be able to develop psychomotor skills for physiotherapist patient relationship.
- 4 To Skill to evaluate and make decision for plan of management based on sociocultural values and referral practice

Course Outcomes: After completion of this course, student will be able to:

- 1 Able to understand the moral values and meaning of ethics
- 2 Acquire bedside manners and communication skills in relation with patients, peers seniors and other professionals.
- 3 Be able to develop psychomotor skills for physiotherapist patient relationship.
- 4 Skill to evaluate and make decision for plan of management based on sociocultural values and referral practice

Pre-requisite of course: At the end of the course the candidate will be able to: 1. Be able to understand the moral values and meaning of ethics 2. Acquire bedside manners and communication skills in relation with patients, peers seniors and other professionals. 3. Be able to develop psychomotor skills for physiotherapist patient relationship. 4. Skill to evaluate and make decision for plan of management based on sociocultural values and referral practice. 5. Be able to develop behavioral skills and humanitarian approach while communicating with patients, relatives, society at large and co-professionals 6. Be able to develop bedside behavior, respect & maintain patients' confidentiality.

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	3
COURSE TITLE	SURGERY
COURSE CODE	17PT0303
COURSE CREDITS	8

Objective:

- 1 To Able to describe preoperative evaluation, surgical indications and various surgical approaches in various abdominal, neurological & cardiothoracic conditions.
- 2 To remember surgical approaches in the form of line diagram and will be able to describe the components of soft tissue, cut to reach the target tissue and possible post operative complications in the movement & posture.
- 3 To Describe the management of head injury, spinal surgeries, intracranial tumors, peripheral nerve injury, pain, wound, ulcer, burns.
- 4 To Describe the normal and abnormal physiological events during puberty, labour, postnatal stage and menopause.
- 5 To Discuss the various complications during pregnancy and management.
- 6 To Acquire the skill of examination of pelvic floor muscles and also a pregnant woman.

Course Outcomes: After completion of this course, student will be able to:

- 1 Able to describe preoperative evaluation, surgical indications and various surgical approaches in various abdominal, neurological & cardiothoracic conditions.
- 2 To remember surgical approaches in the form of line diagram and will be able to describe the components of soft tissue, cut to reach the target tissue and possible post operative complications in the movement & posture.
- 3 Describe the management of head injury, spinal surgeries, intracranial tumors, peripheral nerve injury, pain, wound, ulcer, burns.
- 4 Describe the normal and abnormal physiological events during puberty, labour, postnatal stage and menopause.
- 5 Discuss the various complications during pregnancy and management.
- 6 Acquire the skill of examination of pelvic floor muscles and also a pregnant woman.

Pre-requisite of course: A basic understanding of human anatomy, physiology, pathology and pharmacology, is often a fundamental prerequisite.

9	Problems of trauma to hand and their management. Problems of trauma to hand and their management.	6
10	Principles of cineplasty Principles of cineplasty: tendon transplant, cosmetic surgery types of grafts, surgery of hands with emphasis on management of traumatic and leprosy hand.	6
11	Breast – Surgery Breast – Surgery	6

Contents : Unit	Topics	Contact Hours
12	Neurophysiology- Neurophysiology, basis of tone, disorders of tone and posture, bladder control, muscle contraction, movement and pain with clinical features and management Congenital and childhood disorders - hydrocephalus spina bifida, Trauma - Broad localization, first aid and management of squal of head injury and spinal cord injury., Diseases of the Spinal Cord - Craniovertebral junction anomalies, syringomyelia, cervical and lumbar disc disease, tumors., Peripheral nerve disorders - Peripheral nerve injuries, localization & management., Entrapment neuropathies., Intracranial tumors - Broad classification, signs and symptoms., Pre-operative Assessment and indications and contraindication for neurosurgery in intracranial tumors., Management of pain, electrical stimulation of the brain and spinal cord., Miscellaneous.	6
13	Basic anatomy chest wall, trachea and bronchial tree, lungs and bronchopulmonary segments, pleura and mediastinum. Basic anatomy chest wall, trachea and bronchial tree, lungs and bronchopulmonary segments, pleura and mediastinum.	3
14	Physiology and mechanics of breathing and use of mechanical breathing - ventilator: (respirators). Physiology and mechanics of breathing and use of mechanical breathing - ventilator: (respirators).	3
15	Investigation of lung diseases including endoscopies. Investigation of lung diseases including endoscopies.	3
16	Chest injury. Chest injury.	3
17	Common suppurative diseases of lung - Bronchiectasis, lung abscess. Common suppurative diseases of lung - Bronchiectasis, lung abscess.	3
18	Bronchogenic carcinoma. Bronchogenic carcinoma.	3
19	Common surgeries of the chest Common surgeries of the chest: Thoracoplasty, Pulmonary dissections, Thoracotomy, Pneumothorax, Hydrothorax- Pneumothorax, Empyema.	3
20	Common diseases of the oesophagus and related conditions causing dysphagia Common diseases of the oesophagus and related conditions causing dysphagia: Cholecystectomy, Colostomy, Ileostomy, Gastrectomy, Hernias, Appendicectomy, Mastectomy, Nephrectomy, Prostatectomy.	3
21	Surgery of portal hypertension. Surgery of portal hypertension.	2
22	Surgery of pulmonary tuberculosis. Surgery of pulmonary tuberculosis.	2

Contents : Unit	Topics	Contact Hours
23	Surgery of heart and great vessels. Surgery of heart and great vessels.	2
24	Investigation of a patient undergoing cardiac surgery. Investigation of a patient undergoing cardiac surgery.	2
25	Basic principles of open-heart Surgery, Heart-lung bypass (Extra Co-portal circulation). Basic principles of open-heart Surgery, Heart-lung bypass (Extra Co-portal circulation).	2
26	Common diseases of the heart requiring surgery both congenital and acquired including open-heart surgery. Common diseases of the heart requiring surgery both congenital and acquired including open-heart surgery.	2
27	Common drugs used in cardiac surgery, their uses, side effects. Common drugs used in cardiac surgery, their uses, side effects.	2
28	Common vascular surgery Common vascular surgery: Embolectomy, Vascular reconstructive surgery, (Thrombosis, Embolism, atherosclerotic and occlusive vascular diseases including coronary artery bypass).	2
29	Anatomy and physiology of the female reproductive organs. Puberty dynamics. Anatomy and physiology of the female reproductive organs. Puberty dynamics.	2
30	Physiology of menstrual cycle-ovulation cycle, uterine cycle, Duration, amount. Physiology of menstrual cycle-ovulation cycle, uterine cycle, Duration, amount.	2
31	Hormonal regulation of menstruation. Hormonal regulation of menstruation.	2
32	Diagnosis of pregnancy Diagnosis of pregnancy.	2
33	Abortion. Abortion.	2
34	Physiological changes during pregnancy Physiological changes during pregnancy.	2
35	Antenatal care. Antenatal care.	2
36	High-risk pregnancy High-risk pregnancy.	2
37	Normal labor. Normal labor.	2
38	Normal puerperium and postnatal. Normal puerperium and postnatal.	2
39	Family planning. Family planning.	2

Contents : Unit	Topics	Contact Hours
40	Medical Termination of Pregnancy (MTP). Medical Termination of Pregnancy (MTP).	2
41	Infection of the female genital tract including sexually transmitted diseases, low backache. Infection of the female genital tract including sexually transmitted diseases, low backache.	2
42	Prolapse of uterus and vagina. Prolapse of uterus and vagina.	2
43	Principles of common gynecological operations: Hysterectomy. Principles of common gynecological operations: Hysterectomy.	2
44	Menopause and its effects. Menopause and its effects.	2
45	Sterility. Sterility.	2
46	Incontinence. Incontinence.	2
Total Hours		148

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours
1	Examination of patients as regards chest & heart diseases. Examination of patients as regards chest & heart diseases.	3
2	Demonstration - Acquaintances with C.T. Surgery. Demonstration - Acquaintances with C.T. Surgery.	3
3	Equipments, I.C.C.U., O.T. Equipments, I.C.C.U., O.T.	3
4	Radiology - X-ray studies - X-ray chest in various lung diseases. Radiology - X-ray studies - X-ray chest in various lung diseases.	3

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	3
COURSE TITLE	PHYSICAL & FUNCTIONAL DIAGNOSIS
COURSE CODE	17PT0304
COURSE CREDITS	6

Objective:

- 1 To Acquire the skill of detection & objective documentation of the Neuro-Musculoskeletal dysfunction such as Pain, altered muscle power, mobility, endurance, limb length, posture, gait, hand function & A.D.L.s.
- 2 To Analyse & discuss the Physiological & Biomechanical bases of movement dysfunction
- 3 To Acquire the skill of performance and interpretation of electrodiagnostic tests and Pulmonary Function Test
- 4 To Analyse Arterial Blood Gas analysis and Exercise Tolerance Test

Course Outcomes: After completion of this course, student will be able to:

- 1 Acquire the skill of detection & objective documentation of the Neuro-Musculoskeletal dysfunction such as Pain, altered muscle power, mobility, endurance, limb length, posture, gait, hand function & A.D.L.s.
- 2 Analyse & discuss the Physiological & Biomechanical bases of movement dysfunction
- 3 Acquire the skill of performance and interpretation of electrodiagnostic tests and Pulmonary Function Test
- 4 Analyse Arterial Blood Gas analysis and Exercise Tolerance Test

Pre-requisite of course: A basic understanding of human anatomy, physiology, pathology, kinesiology and biomechanics is often a fundamental prerequisite.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
80	0	80	50	30	20	50	50

Contents : Unit	Topics	Contact Hours
1	General principles of Human development & maturation Aspects: physical, motor, sensory, cognitive, emotional, cultural, social., Factors influencing human development & growth: Biological, environmental, inherited., Principles of maturation - in general - in anatomical directional pattern cephalo – caudal proximo – distal centero – lateral, mass to specific pattern, gross to fine motor development., Reflex maturation tests, Development in specific fields: Oromotor development, sensory development, neurodevelopment of hand function.	10
2	Electrodiagnosis Bioelectricity-Physiology of generation & propagation of action potential, volume conduction., Therapeutic current-as a tool for electro diagnosis., Physiological principles, use of alternating & direct currents in electro-diagnosis such as sensory & Pain threshold, Pain tolerance, Short & long pulse test, S.D. curves, Chronaxie & Rheobase, accommodation ratio., Principles of nerve conduction studies, late responses., E.M.G. instrumentation, basic components, panel diagram, types of electrodes., Principles of Electro- myography, motor unit –Normal characteristics-activity at rest, recruitment/frequency pattern at minimal activity, Interference pattern.	10
3	Assessment of Neurological dysfunction Higher functions, cranial nerves, sensations & sensory organization, body image, tone, reflexes: superficial & deep, voluntary control, muscle strength, coordination, balance, posture, gait., Scales: FRT, Berg's Balance, modified Ashworth, Glasgow Coma, TUG, FIM., Functional diagnosis using ICF., Interpretation of electro diagnostic findings, routine biochemical investigations.	10
4	Assessment of Musculoskeletal Dysfunction Tightness, deformity, joint mobility, muscle strength, limb length, trick movement, girth, posture, gait, special tests., Functional diagnosis using ICF., Interpretation of X-ray of extremities & spine, routine bio-chemical investigations, CT scan, MRI. Assessment of pelvic floor muscle strength and function, Digital evaluation of vagina, Perineometer, Pad test, Disability Evaluation: Gait and gait parameters, percentage of disability (temporary and permanent).	10
5	Assessment of cardio-pulmonary dysfunction Vital parameters, chest expansion, chest excursion, breath holding test, breath sounds, Rate of Perceived Exertion (RPE), Peak Flow Rate (PFR), Exercise Tolerance: six minutes' walk test, shuttle test, theoretical bases of Bruce's protocol, step test., Ankle Brachial Index, tests for peripheral arterial & venous circulation., Functional diagnosis using ICF., Interpretation of X-ray chest, routine bio-chemical investigations, ABG, PFT, ECG (normal values).	10
6	Assessment of pain Intensity & quality., Objective assessment & documentation: VAS, Numerical Rating Scale. Other scales.	8

Contents : Unit	Topics	Contact Hours
7	Assessment of Hand Sensations, mobility of joints, strength., Special tests., Hand function: Precision & power grips.	8
8	Assessment of Obesity Classification., Assessment – BMI, Waist circumference, Waist – Hip ratio., Introduction to Quality-of-Life Questionnaire.	8
9	Assessment of Wounds. Assessment of wounds.	6
Total Hours		80

Suggested List of Experiments:

Contents : Unit	Topics	Contact Hours

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	3
COURSE TITLE	ORTHOPEDICS (TRAUMATIC & NON-TRAUMATIC)
COURSE CODE	17PT0305
COURSE CREDITS	4

Objective:

- 1 To Understand the pathophysiology, clinical manifestations and conservative/surgical management of various traumatic, non-traumatic & infectious cases of the musculoskeletal conditions.
- 2 To Able to gain the skill of clinical examination and interpretation of the preoperative cold cases and all the post-operative cases.
- 3 To Able to read and interpret pathological/biochemical studies and radio imaging of orthopaedic conditions and able to correlate the findings with the clinical findings
- 4 To Understand the pathophysiology, clinical manifestations and conservative/surgical management of various traumatic, non-traumatic & infectious cases of the musculoskeletal conditions. Able to gain the skill of clinical examination and interpretation of the preoperative cold cases and all the post-operative cases. Able to read and interpret pathological/biochemical studies and radio imaging of orthopaedic conditions and able to correlate the findings with the clinical findings

Course Outcomes: After completion of this course, student will be able to:

- 1 Understand the pathophysiology, clinical manifestations and conservative/surgical management of various traumatic, non-traumatic & infectious cases of the musculoskeletal conditions.
- 2 Able to gain the skill of clinical examination and interpretation of the preoperative cold cases and all the post-operative cases.
- 3 Able to read and interpret pathological/biochemical studies and radio imaging of orthopaedic conditions and able to correlate the findings with the clinical findings
- 4 Understand the pathophysiology, clinical manifestations and conservative/surgical management of various traumatic, non-traumatic & infectious cases of the musculoskeletal conditions. Able to gain the skill of clinical examination and interpretation of the preoperative cold cases and all the post-operative cases. Able to read and interpret pathological/biochemical studies and radio imaging of orthopaedic conditions and able to correlate the findings with the clinical findings

Pre-requisite of course: A basic understanding of human anatomy, physiology, pathology, kinesiology and biomechanics is often a fundamental prerequisite.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
80	0	0	50	30	20	0	0
Contents : Unit	Topics						Contact Hours
1	Introduction Introduction: Fracture, Dislocation and injuries of the upper limb, Briefly mention general principles of orthopedic surgery, Definition and scope, Brief history.						4
2	Fracture & dislocations Fracture & dislocations: Causes, Types, Mechanisms, Displacement, General symptoms, Healing, Principles of treatment, Complications, Malunion, Delayed union, Non-union, Myositis Ossificans, Volkmann's ischemic contracture, Fat embolism, Sudeck's osteodystrophy.						4
3	Injuries to the hand Injuries to the hand: Types (open, closed), Principles of treatment, Injuries to the phalanges, Sprains, Dislocations of MP & IP joints, Fractures of the phalanges, Metacarpals, Bennet's fracture, Mallet's finger, Tendon injuries (flexor & extensor).						4
4	Wrist & Forearm injuries Wrist & Forearm injuries: Wrist dislocation, Colle's fracture, Displaced epiphysis, Smith's fracture, Barton's fracture, Injuries to carpal, Scaphoid and sprains, Fractures of forearm bones – greenstick fracture. Infracoracoid injury, Galeazzi, Monteggia fracture dislocation.						4
5	Injuries to the elbow Injuries to the elbow: Traumatic synovitis, Sprain, Dislocation of the elbow joint.						4
6	Fractures involving elbow joint Fractures involving elbow joint: Supracondylar fracture, Intercondylar fracture, Fracture medial epicondyle, Fracture of the lateral condyle, Myositis ossificans, Volkmann's Ischemic Contracture, Fracture of the head of the radius, Fracture of Olecranon.						4
7	Injuries of shoulder and arm Injuries of shoulder and arm: Fractures of the proximal end, Neck and shaft of humerus, Fractures of clavicle, Acromioclavicular and sternoclavicular dislocations, Fractures of the scapula.						4
8	Injuries of the spine and thoracic cage Injuries of the spine and thoracic cage: Injuries to the cervical spine (Both upper and lower), atlantoaxial injuries, Dorso Lumbar spine: classification, mechanism and types of injuries, stable fracture without paraplegia, fracture-dislocation with paraplegia, management of fracture, management of paraplegia, bedsore and bladder care. Fracture of rib and sternum.						4

Contents : Unit	Topics	Contact Hours
9	Injuries of the pelvis Injuries of the pelvis: Fractures, Mechanism, Classification, Management, Fractures of Acetabulum, Sacrum and coccyx.	4
10	Injuries of the lower limb Injuries of the lower limb: Dislocations of the hip joint, interic fractures of femur, Fractures of the neck of femur, Intracapsular and trochanteric fractures of femur, Fracture of the shaft of the femur, Fracture femur in children, Fracture of femoral condyles, Tibial condyles and patella. Injuries to extensor mechanism, Contusion, Hemarthrosis, Knee joint dislocation and traumatic dislocation of the patella, Fracture and fracture-dislocation of the ankle, Epiphyseal injury lower end of tibia, Foot fracture of talus, Calcaneum, Metatarsals and phalanges.	4
11	Soft tissue injuries Soft tissue injuries: Ligamentous injuries of ankle, knee and injury to Muscles. Orthopedic splints and appliances for injuries to muscles and tendons.	4
12	Tendon transfer Tendon transfer: Principles, Indications, Common tendon transfer surgeries.	4
13	Amputation Amputation: Types, Site, Ideal stump, Complications, General principles of treatment Upper extremity and lower extremity amputations – prosthesis and prosthetic service, Principles of operative management, Indications and contraindications for arthroplasty, Osteotomy, Arthrodesis, Spinal stabilization, Arthroscopy.	4
14	Limb reattachment Limb reattachment: Principles, Indications, Technique.	4
15	General Orthopedics General Orthopedics: Clinical examination of an orthopedic patient, investigation, radiological and imaging techniques (salient features), Deformities, acquired deformities, causes and principles of management, splinting, Traction: procedures, materials, Preventive orthopedics, Geriatric orthopedics	3
16	Congenital disorders Congenital disorders: Torticollis, wry neck, kyphosis, lordosis, scoliosis, spina bifida, myelomeningocele, congenital dislocation of the hip, congenital genu recurvatum, talipes equinovarus, Elevation of scapula, Madelung's deformity, coxa vara, Endocranial dystosis, superior radio-ulna dysostosis, sternocleidomastoid tumor.	3
17	Infection of bones & joints Infection of bones & joints: Osteomyelitis (acute and chronic), Brody's abscess as a complication of open fracture, Skeletal tuberculosis, principles of treatment, T.B. of the shoulder, elbow and wrist T.B. of hip, knee ankle, and foot, Dactylitis, caries rib.	3

Contents : Unit	Topics	Contact Hours
18	Arthritis Arthritis: Osteoarthritis, Rheumatoid arthritis, A.S, Gouty arthritis, acute pyogenic arthritis, septic arthritis of infancy, smallpox arthritis, Syphilitic infection of joint.	3
19	Bone tumors Bone tumors: Classification, true bone tumors- osteosarcoma, giant cell tumor, Ewing's sarcoma, chondroblastoma, chondrosarcoma, fibrosarcoma, lymphoma of bone, plasmacytoma, Bone metastasis: synovial sarcoma, hemangioma of bone, adamantinoma of long bones and chondroma, Tumor like lesions: osteoid osteoma, benign osteoblastoma, non-osteogenic fibroma, osteoma, osteochondroma and enchondroma.	3
20	Neurological and Muscular disorders Neurological and Muscular disorders: Definition, causes, clinical feature, complications, management (Multidisciplinary approach) medical and surgical of the following conditions: Cerebral palsy, Poliomyelitis, Leprosy, Muscular dystrophy – types and treatment, Injuries to plexus and nerves: Radial, Ulnar, Median, Brachial plexus, Sciatic and Lateral Popliteal.	3
21	Regional conditions of Spine and Lower limb Regional conditions of Spine and Lower limb: Back: Kyphosis, Scoliosis, Spondylolisthesis, Lumbosacral strain, intervertebral disc prolapse, fibrositis back, Lumbar canal stenosis, sacroiliac strain, spondylosis, spondylolysis, Hip: Slipped capital femoral epiphysis, idiopathic chondrolysis of the hip, Knee: Genu valgum, genu varum, tibia varum, genu recurvatum, quadriceps fibrosis, recurrent dislocation of patella, bursa around the knee, loose bodies in the knee, chondromalacia patella, Plica syndrome, Hoffa's pad syndrome, Foot: Painful heel (calcaneal spur) Plantar fasciitis, Posterior heel pain, flat foot, foot strain, pain in the forefoot, Hallux valgus, anterior metatarsalgia, tarsal tunnel syndrome, Morton's neuroma.	3
22	Regional conditions of Neck and Upper limb Regional conditions of Neck and Upper limb: Neck: Cervical spondylosis, intervertebral disc prolapses, Cervical rib, torticollis, Brachialgia, Shoulder: Supraspinatus tendinitis, calcification, rupture of the rotator cuff, peri arthritis shoulder, deltoid fibrosis, subarachnoid bursitis, Bicipital tendinitis, Elbow: Tennis elbow, Golfer's elbow, recurrent slipping of ulnar nerve, cubitus varus and Valgus, Wrist and Hand: Ganglion, De Quervain's disease, trigger finger, trigger thumb, carpal tunnel syndrome and Dupuytren's contracture, Miscellaneous: metabolic disease, rickets, osteomalacia, osteoporosis, parathyroid osteodystrophy, scurvy etc.	3
Total Hours		80

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	3
COURSE TITLE	PREVENTIVE HEALTHCARE AND COMMUNITY MEDICINE
COURSE CODE	17PT0306
COURSE CREDITS	4

Objective:

- 1 To Able to describe the concept of health and diseases, the natural history of diseases.
- 2 To Able to describe the health care delivery system and able to describe the health problems of vulnerable groups and national health programmes.
- 3 To Able to identify occupational health hazards and their management and describe the role of various health agencies, Non-Government Organisation (NGOs) at the international and national level.
- 4 To Acquire the knowledge in preventive and curative measures that are required to be practised in the community and at all levels of the health care system

Course Outcomes: After completion of this course, student will be able to:

- 1 Able to describe the concept of health and diseases, the natural history of diseases.
- 2 Able to describe the health care delivery system and able to describe the health problems of vulnerable groups and national health programmes.
- 3 Able to identify occupational health hazards and their management and describe the role of various health agencies, Non-Government Organisation (NGOs) at the international and national level.
- 4 Acquire the knowledge in preventive and curative measures that are required to be practised in the community and at all levels of the health care system

Pre-requisite of course: A basic understanding of human anatomy, physiology, pathology, sociology, and psychology is often a fundamental prerequisite.

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	4
COURSE TITLE	PHYSIOTHERAPY IN MUSCULOSKELETAL CONDITIONS
COURSE CODE	17PT0401
COURSE CREDITS	5

Objective:

- 1 To Describe as well as acquire the skill of executing short and long term physiotherapy treatment by selecting appropriate modes of mobilization/ manipulation, electrotherapy, therapeutic exercise and appropriate ergonomic advise for the relief of pain, restoration / maintenance of function & / or rehabilitation for maximum functional independence in ADLs at home & workplace.
- 2 To Prescribe appropriate walking aids, orthoses and prosthesis.
- 3 To identify, discuss and analyze the musculoskeletal dysfunction in terms of biomechanical, kinesiological and biophysical basis and correlate the same with the provisional diagnosis, routine radiological and electro physiological investigations and arrive at appropriate physical and functional diagnosis with clinical reasoning.
- 4 To describe as well as acquire the skill of executing short and long term physiotherapy treatment by selecting appropriate modes of mobilization/ manipulation, electrotherapy, therapeutic exercise and appropriate ergonomic advise for the relief of pain, restoration / maintenance of function & / or rehabilitation for maximum functional independence in ADLs at home & workplace
- 5 To understand the nature of sports injuries, able to evaluate and treat sports injuries, understand the role of physiotherapist in training and rehabilitating a sports person.
- 6 To prescribe appropriate walking aids, orthoses and prosthesis

Course Outcomes: After completion of this course, student will be able to:

- 1 Identify, discuss and analyze the musculoskeletal dysfunction in terms of biomechanical, kinesiological and biophysical basis and correlate the same with the provisional diagnosis, routine radiological and electro physiological investigations and arrive at appropriate physical and functional diagnosis with clinical reasoning.
- 2 Describe as well as acquire the skill of executing short and long term physiotherapy treatment by selecting appropriate modes of mobilization/ manipulation, electrotherapy, therapeutic exercise and appropriate ergonomic advise for the relief of pain, restoration / maintenance of function & / or rehabilitation for maximum functional independence in ADLs at home & workplace
- 3 Understand the nature of sports injuries, able to evaluate and treat sports injuries, understand the role of physiotherapist in training and rehabilitating a sports person.
- 4 Prescribe appropriate walking aids, orthoses and prosthesis

Pre-requisite of course: A basic understanding of orthopaedics, physical and functional diagnosis, exercise therapy and electro therapy is often a fundamental prerequisite.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
80	0	40	50	30	20	50	50

Contents : Unit	Topics	Contact Hours
1	Evaluation, interpretation of investigations & functional diagnosis (ICF) with appropriate clinical reasoning for planning & implementation of management techniques Evaluation, interpretation of investigations & functional diagnosis (ICF) with appropriate clinical reasoning for planning & implementation of management techniques	2
2	Planning, Prescription & Implementation of short term & long term goals with clinical reasoning Planning, Prescription & Implementation of short term & long term goals with clinical reasoning	2
3	Documentation Documentation	1
4	Different physiotherapeutic techniques for functional restoration/maintenance and prevention of disability. Different physiotherapeutic techniques for functional restoration/maintenance and prevention of disability.	2
5	Different electro therapeutic techniques for relief of acute and chronic pain, swelling, wound healing, re-education with clinical reasoning Different electro therapeutic techniques for relief of acute and chronic pain, swelling, wound healing, re-education with clinical reasoning	2
6	Different physiotherapeutic techniques to improve/maintain muscle performance. Different physiotherapeutic techniques to improve/maintain muscle performance.	3
7	Different physiotherapeutic techniques to increase joint mobility Different physiotherapeutic techniques to increase joint mobility	3
8	Different physiotherapeutic strategies for correction / maintenance of good posture Different physiotherapeutic strategies for correction / maintenance of good posture	1
9	Different physiotherapeutic strategies to improve efficiency and safety of gait pattern Different physiotherapeutic strategies to improve efficiency and safety of gait pattern	2

Contents : Unit	Topics	Contact Hours
10	Prescription of appropriate orthotic & prosthetic devices & fabrication of simple temporary splints Prescription of appropriate orthotic & prosthetic devices & fabrication of simple temporary splints	1
11	Appropriate Home Program & Ergonomic advice for preventive measures & Functional efficiency at home & work place. Appropriate Home Program & Ergonomic advice for preventive measures & Functional efficiency at home & work place.	2
12	Physiotherapy approach in traumatology Definition of fracture, classification of fracture, signs and symptoms of fracture, healing process of fracture factors affecting healing, methods of reduction, complications of fracture	4
13	Physiotherapy assessment in fracture cases Principles of PT management in fractures - Guidelines for fracture treatment during period of immobilization and guidelines for treatment after immobilization period, Physiotherapy assessment and management of upper limb fractures and dislocations, Physiotherapy assessment and management of lower limb fractures and dislocations including pelvis and spinal fractures	5
14	Physiotherapy assessment & management of soft tissue injury Contusion, Contusion, sprains, strains, ruptures	3
15	Physiotherapy assessment & management of degenerative conditions Osteoarthritis (OA) with emphasize on Knee, Hip and and cervical spondylosis, lumbar spondylosis	6
16	Physiotherapy assessment & management of inflammatory conditions Rheumatoid arthritis (RA), ankylosing spondylitis (AS), Still's disease, gout,, peri-arthritis, bursitis, synovitis, capsulitis, tendinitis, Tenosynovitis, fasciitis, Osgood Schlatter disease	7
17	Physiotherapy assessment and management of infective Conditions Tuberculosis (TB) of spine and other major joints, osteomyelitis, pyogenic arthritis, septic arthritis, osteomyelitis, pyogenic arthritis, septic arthritis	3
18	Physiotherapy assessment & management of congenital and acquired deformities Congenital - CTEV, CDH, Torticollis, pesplanus, pescavus, Sprengel's scapula, Madelung's deformity, Acquired: scoliosis, kyphosis, coxavara, genu varum, valgum and recurvatum, wry neck	5
19	Physiotherapy assessment & management of spinal conditions Spondylolisthesis, Spinal canal stenosis, Spondylolysis, Intervertebral disc prolapse,, Sacro-iliac joint dysfunction, Coccydynia, Sacralisation, Lumbarisation, Spina bifida.	6

Contents : Unit	Topics	Contact Hours
20	Physiotherapy assessment & management of amputations Definition, indications, types, levels of amputation of lower and upper extremities, pre and post operative assessment and management with emphasize on stump care and bandaging, pre and post prosthetic training and complete rehabilitation	4
21	Rehabilitation of patient with orthopedic surgery Pre and post operative management of arthroplasty of all major joints, girdle stonearthroplasty , arthrodesis, arthroscopy, osteotomy, Reattachment of limb.	5
22	Physiotherapy assessment & management of re-constructive surgery Cerebral Palsy, poliomyelitis, leprosy	3
23	Physiotherapy assessment & management of hand injury Physiotherapy assessment & management of hand injury	2
24	Physiotherapy assessment & management of metabolic and hormonal disorders of the bone tissue Osteoporosis, rickets, osteomalacia	1
25	Physiotherapy assessment & management of miscellaneous orthopedic conditions Mallet finger, trigger finger, Dequerian's disease, metatarsalgia, hallux valgus, Dupuytren's contracture, thoracic outlet syndrome, chondromalacia patellae, ganglion, tennis elbow, plantar fasciitis	2
26	Sports Medicine Introduction & classification of sports injury Aetiological factors Prevention of sports injury Frequency and site of injury Investigation and assessment in sports injury	2
27	Management Of Sports Injuries Pharmacology in sports Rehabilitation in sports	1

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	4
COURSE TITLE	PHYSIOTHERAPY IN NEUROLOGICAL CONDITIONS
COURSE CODE	17PT0402
COURSE CREDITS	5

Objective:

- 1 Acquire the knowledge of normal neurodevelopment with specific reference to locomotion
- 2 Assess, identify and analyze neuro motor and psychosomatic dysfunction in terms of alteration in the muscle tone, power, coordination, involuntary movements, sensations, perceptions etc
- 3 Correlate the assessment findings with provisional diagnosis and investigations such as EMG/NCS and arrive at Physical and functional diagnosis with clinical reasoning in various neuromuscular disorders
- 4 Plan, prescribe and execute short term and long term treatment with special reference to relief of neuropathic and psychosomatic pain and use of various physiotherapeutic techniques/ modalities, including ergonomic advice and parent education in Neuro pediatric cases
- 5 Acquire the knowledge of normal neurodevelopment with specific reference to locomotion.
- 6 Assess, identify and analyze neuro motor and psychosomatic dysfunction in terms of alteration in the muscle tone, power, coordination, involuntary movements, sensations, perceptions etc.
- 7 Correlate the assessment findings with provisional diagnosis and investigations such as EMG/NCS and arrive at Physical and functional diagnosis with clinical reasoning in various neuromuscular disorders.
- 8 Plan, prescribe and execute short term and long term treatment with special reference to relief of neuropathic and psychosomatic pain and use of various physiotherapeutic techniques/ modalities, including ergonomic advice and parent education in Neuro pediatric cases.
- 9 Prescribe appropriate outhouses/splints and fabricate temporary protective and functional splints.
- 10 To acquire the knowledge of normal neurodevelopment with specific reference to locomotion
- 11 To assess, identify and analyze neuro motor and psychosomatic dysfunction in terms of alteration in the muscle tone, power, coordination, involuntary movements, sensations, perceptions etc.
- 12 To correlate the assessment findings with provisional diagnosis and investigations such as EMG/NCS and arrive at Physical and functional diagnosis with clinical reasoning in various neuromuscular disorders

Objective:

- 13 To plan, prescribe and execute short term and long term treatment with special reference to relief of neuropathic and psychosomatic pain and use of various physiotherapeutic techniques/ modalities, including ergonomic advice and parent education in Neuro pediatric cases
- 14 To prescribe appropriate outhouses/splints and fabricate temporary protective and functional splints.

Course Outcomes: After completion of this course, student will be able to:

- 1 Acquire the knowledge of normal neurodevelopment with specific reference to locomotion
- 2 Assess, identify and analyze neuro motor and psychosomatic dysfunction in terms of alteration in the muscle tone, power, coordination, involuntary movements, sensations, perceptions etc
- 3 Correlate the assessment findings with provisional diagnosis and investigations such as EMG/NCS and arrive at Physical and functional diagnosis with clinical reasoning in various neuromuscular disorders
- 4 Plan, prescribe and execute short term and long term treatment with special reference to relief of neuropathic and psychosomatic pain and use of various physiotherapeutic techniques/ modalities, including ergonomic advice and parent education in Neuro pediatric cases
- 5 Prescribe appropriate outhouses/splints and fabricate temporary protective and functional splints.

Pre-requisite of course: A basic understanding of neurology, physical and functional diagnosis, exercise therapy and electro therapy is often a fundamental prerequisite.

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	4
COURSE TITLE	PHYSIOTHERAPY IN CARDIO PULMONARY AND MEDICAL SURGICAL CONDITIONS
COURSE CODE	17PT0403
COURSE CREDITS	5

Objective:

- 1 Identify, discuss and analyze cardio vascular and pulmonary dysfunction based on pathophysiological principles and arrive at the appropriate physical and functional diagnosis
- 2 Select strategies for cure, care and prevention to adopt restorative and rehabilitative measures for maximum possible functional independence of a patient at home, work place and in community
- 3 Execute the effective physiotherapeutic measures (with appropriate clinical reasoning) with special emphasis to breathing retraining, nebulization, humidification, bronchial hygiene, general mobilization and exercise conditioning in general medical and surgical conditions
- 4 Acquire knowledge of the overview of patients care at the intensive care area, artificial ventilation, suctioning, positioning for bronchial hygiene and continuous monitoring of the patient at the intensive care area
- 5 Acquire the skill of evaluation and interpretation of functional capacity using simple exercise tolerance tests, symptom limited tests
- 6 Acquire the skill of basic cardiopulmonary resuscitation
- 7 To identify, discuss and analyze cardio vascular and pulmonary dysfunction based on pathophysiological principles and arrive at the appropriate physical and functional diagnosis
- 8 To select strategies for cure, care and prevention to adopt restorative and rehabilitative measures for maximum possible functional independence of a patient at home, work place and in community
- 9 To execute the effective physiotherapeutic measures (with appropriate clinical reasoning) with special emphasis to breathing retraining, nebulization, humidification, bronchial hygiene, general mobilization and exercise conditioning in general medical and surgical conditions
- 10 To acquire knowledge of the overview of patients care at the intensive care area, artificial ventilation, suctioning, positioning for bronchial hygiene and continuous monitoring of the patient at the intensive care area
- 11 To acquire the skill of evaluation and interpretation of functional capacity using simple exercise tolerance tests, symptom limited tests
- 12 To acquire the skill of basic cardiopulmonary resuscitation

Course Outcomes: After completion of this course, student will be able to:

- 1 Identify, discuss and analyze cardio vascular and pulmonary dysfunction based on pathophysiological principles and arrive at the appropriate physical and functional diagnosis
- 2 Select strategies for cure, care and prevention to adopt restorative and rehabilitative measures for maximum possible functional independence of a patient at home, work place and in community
- 3 Execute the effective physiotherapeutic measures (with appropriate clinical reasoning) with special emphasis to breathing retraining, nebulization, humidification, bronchial hygiene, general mobilization and exercise conditioning in general medical and surgical conditions
- 4 Acquire knowledge of the overview of patients care at the intensive care area, artificial ventilation, suctioning, positioning for bronchial hygiene and continuous monitoring of the patient at the intensive care area
- 5 Acquire the skill of evaluation and interpretation of functional capacity using simple exercise tolerance tests, symptom limited tests
- 6 Acquire the skill of basic cardiopulmonary resuscitation

Pre-requisite of course: A basic understanding of medicine, surgery, physical and functional diagnosis, exercise therapy and electro therapy is often a fundamental prerequisite.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work
80	0	40	50	30	20	50	50

Contents : Unit	Topics	Contact Hours
1	Anatomy and physiology of respiratory & cardiac system Anatomy of thorax, biomechanics of thoracic cage, muscles of respiration, ventilation perfusion matching /mismatching, compliance	1
2	Investigations and tests Sub maximal /maximal exercise tolerance testing, Cardiac & Pulmonary radiographs, PFT, ABG, ECG, hematological and biochemical Tests.	2
3	Physiotherapy techniques to increase lung volume Positioning, breathing exercises, Neurophysiological facilitation of respiration, mechanical aids - Incentive spirometry, CPAP, IPPB.	5
4	Physiotherapy techniques to decrease the work of breathing Measures to optimize the balance between energy supply and demand, positioning, Breathing re-education – Breathing control techniques, mechanical aids: IPPB, CPAP, BIPAP	4

Contents : Unit	Topics	Contact Hours
5	Physiotherapy techniques to clear secretions Hydration, Humidification & Nebulization, Mobilization and breathing exercises, postural drainage, , Manual techniques: Percussion, vibration and shaking, ACBT, Autogenic Drainage, Mechanical aids: PEP, Flutter, IPPB, facilitation of cough and huff, suctioning	5
6	Physiotherapy in common complications following surgery and Drug therapy Drugs to prevent and treat inflammation, drugs to treat bronchospasm, drugs to treat breathlessness, drugs to help sputum clearance, drugs to inhibit coughing, drugs to improve ventilation, drugs to reduce pulmonary hypertension, drug delivery doses, inhalers and nebulizers	2
7	Introduction to ICU & mechanical ventilator ICU monitoring – apparatus, airways and tubes used in the ICU - Physiotherapy in the ICU – common conditions in the ICU, Mechanical ventilator: types, modes of ventilator, advantages and disadvantages Oxygen therapy, CPR, aseptic precautions	6
8	Physiotherapy assessment & management techniques in Obstructive lung conditions Chronic bronchitis, emphysema, asthma, bronchiectasis, cystic fibrosis	5
9	Physiotherapy assessment & management techniques in Restrictive lung conditions Rib fracture, Pleural effusion, pleurisy and empyema, pulmonary embolism, pulmonary tuberculosis, atelectasis, pneumothorax, bronchopulmonary fistula, pneumonia, ARDS	5
10	Physiotherapy following Lung surgeries Pre and post operative physiotherapy assessment and management in Lobectomy, Pneumonectomy, decortication, thoracoplasty	3
11	Pulmonary Rehabilitation Definition, aims and objectives, team members, benefits, , principles of exercise prescription and techniques of rehabilitation	3
12	Anatomy and physiology of cardiovascular system Anatomy, blood supply and conduction system of heart	1
13	Physiotherapy assessment & management for cardiovascular disorders Cardiovascular disease, congestive heart failure, myocardial infarction, valvular diseases of heart, Cyanotic and acyanotic congenital heart diseases, endocarditis	5
14	Cardiac Rehabilitation Definition, aims and objectives, team members, benefits, principles of Exercise prescription and techniques of rehabilitation	3
15	Physiotherapy assessment & management of vascular diseases Venous: Thrombosis, phlebitis and phlebo-thrombosis, varicose veins, DVT, venous Ulcers , Arterial: Berger's disease, acute and chronic arterial occlusion, lymphedema	4

Contents : Unit	Topics	Contact Hours
16	Physiotherapy assessment and management for abdominal Surgeries Operations on upper gastro- intestinal tract - oesophagus- stomach-duodenum,, operation on large and small intestine – apendicetomy, cholecystectomy, partial colectomy, illieostomy, nephrectomy Hernia: herniotomy, herniorraphy, hernioplasty	3
17	Physiotherapy Assessment & management in Onco surgeries Mastectomy: simple, radical Hysterectomy, prostatectomy, neck dissection	2
18	Physiotherapy in Obstetrics and Gynaecological surgeries Electrotherapy and exercise therapy measures following pelvic repair, caesarean section	3
19	Wounds, local infections, ulcers, pressure sores UVR and other electrotherapeutic modalities for healing of wound, prevention of hypergranulated scars, relief of pain and mobilization	2
20	Physiotherapy in burns, skin grafts and re-constructive surgery Physiotherapy in burns, skin grafts and re-constructive surgery	4
21	Physiotherapy in ENT conditions Nonsuppurative otitis media, chronic suppurative otitis media, otosclerosis, labyrinthitis and mastoidectomy resulting into facial palsy, Laryngectomy, pharyngeal – laryngectomy, tracheostomy and its care, sinusitis	3
22	Physiotherapy in skin conditions Leprosy, acne, alopecia, psoriasis, syphilis	2
23	Physiotherapy in psychiatric conditions Schizophrenia, depression, psychosis, anxiety	1
24	Physical fitness Energy system, Endurance, Aerobic Exercise, pacing of activity	2
25	Emergency Care Basic Life Support, First aid & emergency care, Biomedical waste management	4

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	4
COURSE TITLE	PHYSIOTHERAPY IN COMMUNITY HEALTH AND BIO-ENGINEERING
COURSE CODE	17PT0404
COURSE CREDITS	2

Objective:

- 1 To describe CBR in urban & rural set up, WHO policies, concept of team work, role of multi- purpose health worker.
- 2 To Acquire in brief knowledge about various materials used for splints/Orthosis & Prostheses and selection criteria for splints/Orthosis& Prostheses.
- 3 To describe the general concepts about Health, Disease & Physical fitness
- 4 To describe CBR in urban & rural set up, WHO policies, concept of team work, role of multi- purpose health worker
- 5 To describe the strategies to assess prevalence & incidence of various conditions responsible for increasing morbidity in the specific community, role of physiotherapy in reducing morbidity, expected clinical & functional recovery, reasons for non-compliance in specific community & environmental solution for the same
- 6 To acquire knowledge about biomechanical principles of application of variety of aids & appliances used for ambulation ,protection & prevention.
- 7 To acquire in brief knowledge about various materials used for splints/Orthosis & Prostheses and selection criteria for splints/ Orthosis & Prostheses.

Course Outcomes: After completion of this course, student will be able to:

- 1 Describe the general concepts about Health, Disease & Physical fitness
- 2 Describe CBR in urban & rural set up, WHO policies, concept of team work, role of multi-purpose health worker.
- 3 Describe the strategies to assess prevalence & incidence of various conditions responsible for increasing morbidity in the specific community, role of physiotherapy in reducing morbidity, expected clinical & functional recovery, reasons for non-compliance in specific community & environmental solution for the same
- 4 Acquire knowledge about biomechanical principles of application of variety of aids & appliances used for ambulation ,protection & prevention.
- 5 Acquire in brief knowledge about various materials used for splints/Orthosis & Prostheses and selection criteria for splints/ Orthosis & Prostheses.

Pre-requisite of course:A basic understanding of preventive healthcare and community medicine, physical and functional diagnosis, exercise therapy and electro therapy is often a fundamental prerequisite.

Teaching and Examination Scheme

The suggested theory distribution as per Bloom's taxonomy is as follows. This distribution serves as guidelines for teachers and students to achieve effective teaching-learning process

Distribution of Theory for course delivery and evaluation					
Remember / Knowledge	Understand	Apply	Analyze	Evaluate	Higher order Thinking / Creative
20.00	20.00	30.00	10.00	10.00	10.00

Instructional Method:

- 1 Classroom teaching, case presentations, clinical practice

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	4
COURSE TITLE	BIostatISTICS AND RESEARCH METHODOLOGY
COURSE CODE	17PT0405
COURSE CREDITS	2

Objective:

- 1 To acquaint students with various statistical tools that are helpful for research purposes.
- 2 To recognize different variables as per their types and should be able to decide on how to treat them differently as per requirement
- 3 To differentiate complete enumeration and various forms of sampling (random: Simple, stratified, cluster, multi stage; non random: snow ball, quota, purposive, convenient) with understanding of merits and demerits of them
- 4 To decide when to apply what test or a measure of central tendency according to the need of the data and OBJECTIVES.
- 5 To interpret a given output of regression or ANOVA according to the context.

Course Outcomes: After completion of this course, student will be able to:

- 1 Recognize different variables as per their types and should be able to decide on how to treat them differently as per requirement
- 2 Differentiate complete enumeration and various forms of sampling (random: Simple, stratified, cluster, multi stage; non random: snow ball, quota, purposive, convenient) with understanding of merits and demerits of them
- 3 Decide when to apply what test or a measure of central tendency according to the need of the data and OBJECTIVES.
- 4 Interpret a given output of regression or ANOVA according to the context.

Pre-requisite of course: Basic computer literacy and basic mathematics is often a fundamental prerequisite.

Teaching and Examination Scheme

Theory Hours	Tutorial Hours	Practical Hours	ESE	IA	CSE	Viva	Term Work

INSTITUTE	FACULTY OF PHYSIOTHERAPY
PROGRAM	BACHELOR OF PHYSIOTHERAPY
SEMESTER	4
COURSE TITLE	PROFESSIONAL PRACTICE AND ETHICS AND ADMINISTRATIVE MANAGEMENT
COURSE CODE	17PT0406
COURSE CREDITS	2

Objective:

- 1 To understand the moral values and meaning of ethics
- 2 To acquire bedside manners and communication skills in relation with patients, peers seniors and other professionals.
- 3 To develop psychomotor skills for physiotherapist patient relationship.
- 4 To develop skill to evaluate and make decision for plan of management based on socio-cultural values and referral practice.
- 5 To develop behavioral skills and humanitarian approach while communicating with patients, relatives, society at large and co-professionals.
- 6 To understand the importance of council, its functioning and Act.

Course Outcomes: After completion of this course, student will be able to:

- 1 Understand the moral values and meaning of ethics.
- 2 Acquire bedside manners and communication skills in relation with patients, peers seniors and other professionals.
- 3 Develop psychomotor skills for physiotherapist patient relationship.
- 4 Develop skill to evaluate and make decision for plan of management based on socio-cultural values and referral practice.
- 5 Develop behavioral skills and humanitarian approach while communicating with patients, relatives, society at large and co-professionals.
- 6 Understand the importance of council, its functioning and Act.

Pre-requisite of course: Student should have basic idea about ethical principals

SEMESTER	4
COURSE TITLE	CLINICAL HOURS
COURSE CODE	17PT0407
COURSE CREDITS	24

Objective:

- 1 To differential diagnosis, treat and advise the patients/clients with various conditions

Course Outcomes: After completion of this course, student will be able to:

- 1 Differential diagnosis, treat and advice the patients/clients with various conditions

Pre-requisite of course: Student should have adequate knowledge regarding all clinical conditions and adequate skills to be performed on patients/clients of various clinical conditions/fitness.
